1 entitled to them. Look at what we had to go to them, and we  
2 have no remedy other than sanctions. And we were denied by the  
3 court and we ask that you reconsider the fact of giving  
4 sanctions for producing these materials in such a late date.

5 THE COURT: My experience with the litigants in this  
6 case has actually been a good experience. The parties, while  
7 they have represented their clients effectively and strongly,  
8 have also understood their responsibility to the bar and to the  
9 court. They have given some seven or eight million documents.  
10 It hasn't been easy. A lot of material takes a long time to  
11 first figure out what you need; secondly, to articulate with  
12 specificity the material and then to find it. It hasn't been  
13 my experience throughout the litigation that the people have  
14 been stonewalling unduly and it has been improper conduct to  
15 justify sanctions. I didn't see it in this instance. I  
16 considered it again, but I will not grant sanctions in this  
17 case. I appreciate your bringing it to my attention.

18 MR. AMEDEE: I reurge to the court that since the  
19 relevance of the alternative design is a first impression  
20 situation, that the court is inclined to grant the defendant's  
21 motion that you do make final judgment so we can --

22 THE COURT: I will get with you all regardless of what  
23 I deal with. I will get with you, and we will talk about it  
24 and see what we do with whatever it is. I don't know exactly  
25 how I am coming down.

1 Stuppy. So they now want to eliminate Stuppy. Same thing was  
2 said of Shell and Eckberg. They shouldn't do it because you  
3 need a gastroenterologist and now you have got a  
4 gastroenterologist. Now they want to eliminate him. So I  
5 think if, in fact, if the design claim goes then obviously Dr.  
6 Stuppy's testimony would be certain to go.

7 THE COURT: Okay. Anything else you want to say?

8 PLAINTIFF STEERING COMMITTEE MEMBER: The motion to  
9 reconsider or on behalf of the plaintiffs in these cases for  
10 the minute entry of January 2nd.

11 THE COURT: Right.

12 PLAINTIFF STEERING COMMITTEE MEMBER: And I just wanted  
13 to ask the court for reconsideration of the fact that the  
14 sanctions such as we were talking about in chambers. There was  
15 quite some delay in getting these documents. If we would have  
16 had them prior to our European depositions, I believe they  
17 could have been a lot more fruitful. And I believe as Mr.  
18 Davis pointed out earlier and it was pointed out by a  
19 memorandum that you have that there was a contemplated area of  
20 discoverable electronic data that was focused that I presume  
21 was to have been turned over to plaintiffs early on. It was  
22 never give to us for any defendant, any of the deponents. We  
23 have now since received about a thousand pages of documents  
24 about a week and a half, two weeks ago that at one point we  
25 didn't execute. Now we are told that, well, you are not

1       So I asked him, I said, well, do you realize a normal QT might  
2       be 50 -- you are talking about anywhere from 5 to 50 something  
3       per 50 millisecond increase. We have got a drug out there  
4       that's taken off the market because of a five to six  
5       millisecond and Janssen was aware of this.

6               THE COURT: What's the other drug?

7               MR. AMEDEE: Seldane. And the others are obviously  
8       have to do with plaintiff's design defect.

9               THE COURT: Right. I will reserve ruling on that.

10              MR. CAMPION: Our last motion, Judge, it is now clear  
11      in view of the arguments that we have had today we will soon  
12      have decided in the context basis that this motion is not  
13      appropriate for resolution at this time. And I think the  
14      resolution of this motion will be tied in with the way in which  
15      you rule on the design defect issue. Thank you, Judge.

16              THE COURT: Okay. Dr. Stuppy.

17              MR. AMEDEE: I don't know if I can let it go at that,  
18      because I want to make it clear to the court that Dr. Stuppy is  
19      a board-certified gastroenterologist and certainly with 20  
20      years of clinical experience is qualified to address the  
21      efficacy of Propulsid and various other things, especially  
22      about this drug's risks and benefits.

23              In their opposition to my response about Dr. Schwartz  
24      as an additional pharmacologist it was argued that well, we  
25      don't, plaintiffs don't need Schwartz because they have got

1 litigate Seldane or Posicor or any other number of drugs. And  
2 I think there may be as many as 100 drugs that have known  
3 impact on the QT. And of course I realize that the argument is  
4 that this is something we knew about and should have known  
5 about it and might have known about it and is out there in the  
6 literature; that, in fact, some of our drugs, for example,  
7 kisplanole I believe was one of our drugs also was associated  
8 with a QT. And certainly in certain circumstances and our view  
9 is that this is clearly an easily definable action 403 if  
10 nothing else -- we don't think this is relevant number one.  
11 And number two there is a Cisapride case and we are not  
12 litigating all of these others.

13 THE COURT: They say it is all relevant because they  
14 say that other drugs is an alternative design and therefore  
15 should be admitted.

16 MR. AMEDEE: That's one of the arguments. And  
17 obviously that's depending upon your Honors' re-decision with  
18 regard to Seldane, it is a question of notice. Seldane was a  
19 drug that was taken off the market because it changed that five  
20 to six millisecond increase in the QTC was significant enough  
21 for this drug to be removed from the market. So it shows  
22 notice to the defendant, and it also shows what, how many  
23 milliseconds is significant. The defense expert was questioned  
24 about that, and as I understand it, and said, well, he never  
25 would give me an answer. So he finally said 10 to 15 percent.

1 documents which I think relate specifically it would be hard  
2 for the court to make a decision on today. But the purpose of  
3 this motion was to bring it to your attention.

4 THE COURT: Check with Mr. Amedee over these things,  
5 because if you are going to adverse reports, that's admitted.  
6 But you have to be a little bit more specific. It has to be  
7 incidents that are similar, incidents that are the same,  
8 incidents that are close enough to get past that and then get  
9 past the 403 confusion and misleading and all the rest of the  
10 things.

11 MR. AMEDEE: I have to tell you about five documents  
12 that he just mentioned. I don't even intend to use any of  
13 them.

14 THE COURT: That's what I'm saying. I think you can  
15 cut them down more.

16 MR. AMEDEE: Are they on the list I gave you today?

17 MR. IRWIN: Yes, they are. The last motion -- I feel  
18 like Karnak -- I have the last motion, next-to-last motion,  
19 next-to-last. This one pertains to other drugs, Judge.

20 THE COURT: Which is that?

21 MR. IRWIN: We are going to litigate Cisapride.

22 THE COURT: Number eight. I've got it.

23 MR. IRWIN: The issue here is whether we are going to  
24 litigate Cisapride and the association between Cisapride and  
25 prolong QT and cardiac interval. Or if we are going to

1 Doctor letter. The FDA has seen some increase in adverse event  
2 reporting and some other things.

3 The next document -- I only have two more -- is dated  
4 February 17, 1998. It was Janssen, it looks like a transmittal  
5 letter from the FDA, and it is a one-page document and all it  
6 does is merely transmit a manufacturer's control number. And  
7 the report of a death. It only has a report code number. It  
8 gives no information to determine whether it is substantially  
9 similar or not.

10 And then there is an e-mail and this is the last one  
11 that I have chosen for example purposes. There is an e-mail  
12 dated March 24, 2000, which would be a serious 407 question.  
13 Apparently it is from people within Janssen, and apparently it  
14 deals with some questions from J.P. Morgan, and it talks about  
15 questions from the analyst. And we describe the sudden adverse  
16 event, further breakout of adverse events. What exactly  
17 happened? Everybody has -- and patient has stopped taking the  
18 drug. And there is a discussion about according to our  
19 standard procedures we follow up on every case. And that sort  
20 of thing. I don't know how that's adverse event report or how  
21 that's notice.

22 So those -- and I did have one more, Judge. There is  
23 another exhibit which is a risk question and answer module. It  
24 was a number of pages of questions and answers. There is  
25 marginalia all over the page. So to me these were examples of

1 can recite them to you as follows: The ones that are now  
2 subject to this motion are number 21 -- this is in our reply  
3 brief. Number 50, number 58, number 62, number 70, 71, 77,  
4 108, 146 and 144.

5 THE COURT: That's plaintiffs' exhibits?

6 MR. IRWIN: Yes, sir. Now, I have just sampled a few  
7 of these exhibits. We know that the standard here is  
8 substantially similar and liability and notice and all that.  
9 But an example of these documents is one, and I don't have the  
10 number here. I should have written it down, but one of them is  
11 a letter from Dr. Alexander Walker dated October 2, 1994 to Dr.  
12 Yee at Janssen. And it is unquestionably hearsay from Dr.  
13 Walker, and I guess the issue is whether it is substantially  
14 similar. And so I would draw the court's attention to that. I  
15 know it is going to be hard for the court to rule on each one  
16 of these.

17 I will use by way of another example another document  
18 is the FDA record of contact dated February 21, 1996. This is  
19 the Janssen internal document, and it records Janssen's  
20 meeting, phone call I think, with the FDA. And I didn't  
21 understand what it had to do with anything in our case. And I  
22 will just read one sentence: This is why the court has to look  
23 at these things. It says: Melody McNeil called with the  
24 question from Dr. Fred. Dr. Fred from the FDA wants to know  
25 why physicians are not following the directives from the Dear

1 like the jury to see.

2 MR. IRWIN: We will cross that bridge when we get  
3 there. The motion addresses these pediatric use in these two.

4 THE COURT: So as I understand it, they are agreeing to  
5 at least on those issues withdraw it.

6 MR. AMEDEE: Withdraw any reference to pediatric.

7 THE COURT: Withdraw any and all reference to  
8 pediatric. Am I correct that motion is subject to another  
9 motion, those minutes?

10 MR. IRWIN: Yes, those minutes are subject to another  
11 motion, yes, they are.

12 MR. AMEDEE: And we would be happy if the court allows  
13 the FDA document in to redact any portion or any document that  
14 we have no pediatric mentioned nor any evidence will be  
15 presented by testimony.

16 MR. IRWIN: Your Honor, the next is the motion  
17 regarding adverse events, reports and other lawsuits. On that  
18 motion may I proceed, your Honor?

19 THE COURT: Yes.

20 MR. IRWIN: We have agreed that there will be no  
21 reference to other lawsuits. Is that correct, Mr. Amedee?

22 MR. AMEDEE: That's correct.

23 MR. IRWIN: So the debate we have is with respect to  
24 the admissibility of other adverse event reports, and I think  
25 that the number of documents at issue has been reduced, and I

1 MR. AMEDEE: To that motion, but if the court would  
2 look at these two particular documents, we want only to use  
3 portions that deal with relevant portions of these claims Diez  
4 brought, not with pediatric. And I thought we tried to do  
5 that.

6 THE COURT: Take a look at it and let e know.

7 MR. IRWIN: I have got, I think I have two documents  
8 here, one is Exhibit 49, which is a list of Propulsid  
9 facilities reports, and there is one table here that talks  
10 about pediatric. There is a whole table that describes  
11 pediatric cases. Now, I don't know if this table is otherwise  
12 admissible on other grounds or excludable on the other hand,  
13 but here this is just a list of pediatric cases.

14 And then the other document, and Mr. Amedee may have  
15 marked these along, but this other one is a Janssen record on  
16 FDA contact days: April 1, 1998. It shows meeting, mentions a  
17 March 27, 1998, meeting. It is a favorite document of my  
18 friend on the other side because it talks about the FDA opinion  
19 since plaintiffs have deferred defecation issues, and we have  
20 see that before. But on the back page it makes a reference to  
21 there was a brief discussion on pediatric use.

22 THE COURT: People were discussing Dr Ward's survey on  
23 pediatric use.

24 MR. AMEDEE: Your Honor, we will be amenable to take  
25 that out. There is a paragraph here that we certainly would

1 in a particular case. And that's really the issue here.

2 Generally when you withdraw something from the market, that's  
3 the same concept that society profits from having things off  
4 the market until the case is finished, it may stay out on the  
5 market too long. And the question really for limited access is  
6 in this category. I will still look it over. I understand it.  
7 I will reserve ruling on it. Do we have any others?

8 MR. IRWIN: Three more, Judge, three briefly, I think.

9 THE COURT: Okay.

10 MR. IRWIN: Pediatrics.

11 THE COURT: How is that in this particular case? It  
12 seems to me that pediatrics may or may not be for another case.  
13 But in this case how does it fit?

14 MR. AMEDEE: It is not. I have two documents that I  
15 have offered to redact any or all partial that have to do with  
16 pediatrics. But there are certain letters regarding Janssen's  
17 warnings.

18 THE COURT: But they may have been issued in the  
19 pediatric area?

20 MR. IRWIN: No, they cover all areas, Judge. In that  
21 regard I ask the court on previous motion to CPMP, to please  
22 look at the documents, because you had mentioned that you  
23 thought it was a pediatric document. It really isn't but  
24 that's on another matter. If you would do so.

25 THE COURT: That's Exhibit 8?

1 reference by somebody that this product is no longer on the  
2 market. And it's still available from a doctor. If a doctor  
3 wanted to go and put a patient on this, he could apply to  
4 Janssen. In other words, it hasn't been recalled. It hasn't  
5 ben withdrawn. It is a limited access program.

6 THE COURT: Their question is whether or not a limited  
7 access is similar to withdrawal from the market.

8 MR. IRWIN: We think the question is whether it is  
9 remedial, and we think it clearly is remedial.

10 THE COURT: Right, right. Well --

11 MR. IRWIN: Withdrawal is generally remedial. And I  
12 also think, Judge, the law is very, very clear here. Stall v.  
13 Navarsuch. And the reason this has been the subject matter of  
14 a number of depositions is because the witnesses were asked  
15 about it and that's why they answered the questions.

16 THE COURT: Also, with the deposition, the fact that  
17 something is not admissible generally doesn't stop it from at  
18 least being inquired about or talked about at the deposition,  
19 because it may lead to admissible information. That's the  
20 whole purpose of the discovery. So that is not significant.

21 The issue really to some extent is subsequent remedial  
22 measures is really a policy question. And the basis is that  
23 you want to encourage people to change matters if they are  
24 unsafe, if they have a shilling effect. To prevent them from  
25 changing anything would hurt society more than by allowing it

1 label. I don't know on the other one. It seems to me also to  
2 be a subsequent remedial measure on 406. But is there any  
3 dispute that here is nobody selling Propulsid anymore on this  
4 market or in this market other than in the limited?

5 MR. IRWIN: It is access.

6 THE COURT: Restricted?

7 MR. IRWIN: Yes, your Honor. Its access is restricted  
8 under the limited access program.

9 THE COURT: Is that going to be admitted, is that part  
10 of the case?

11 MR. AMEDEE: We do not intend on admitting it. We do  
12 not intend on admitting evidence after the relevant time  
13 period. So we clearly believe that limited access program is a  
14 remedial measure because it limited the way in which the  
15 product could be distributed by the doctors and controlling  
16 their distribution of it. So we clearly look at it as a  
17 product, it is in the nature of a product change. Your Honor,  
18 this particular has permeated throughout every deposition,  
19 throughout the four or five times if not more in every  
20 deposition. It is prevalent throughout all of the testimony,  
21 the evidence that has been presented in this case. It will be  
22 almost impossible without somebody making reference to it.  
23 Now, we are not going to make a big issue of it and go into  
24 what the program is entailed, but I think that it is going to  
25 be impossible to conduct this trial without there being a

1 was right prior to the drug being taken off the market. It is  
2 also, I guess, evidence of the fact that he didn't want to get  
3 to an advisory board meeting with the FDA because they knew  
4 that certain things were going to happen, that they did not  
5 want to happen. So subsequently they took the product off the  
6 market.

7           So quite simply put I think that your Honor has in the  
8 courtroom on previous occasions alluded to the fact that the  
9 product is no longer available in the open market. When  
10 questioned about this by virtually every witness that we have  
11 questioned, if you look at the back of our brief we show  
12 numerous quotes from various Janssen employees that they  
13 steadfastly said that it is not off the market -- you can still  
14 get it -- we have never recalled it. We have never determined,  
15 never been a recall or story that we withdrew it from the  
16 market. And the cases that the defendants cite all deal with  
17 recalls, not all of which were not allowed -- there were several  
18 that did allow evidence of recall. There is not a recall as to  
19 the liability itself. I have actually warning labels in this  
20 case is an integral part, and their label once again came just  
21 a month after Mr. Diez, two or three months after he died. And  
22 I think it goes to help establish measures that could have been  
23 taken. But through their efforts they fought these labels.

24           THE COURT: I don't see the label -- I see the label as  
25 clearly subsequent remedial measure. I would exclude the

1 that is so extenuating to what we are doing litigation in -- if  
2 a party was scheduled and then cancelled -- to what we are  
3 going to be litigating.

4 THE COURT: Let me look at 90 through 93 and just can  
5 other ones, and I will be more specific on that. Let me look  
6 at 90 through 93. I will reserve ruling on it.

7 Mr. IRWIN: Your Honor, subsequent remedial measures.

8 THE COURT: Yes. Let me hear from the plaintiffs on  
9 that. How does subsequent remedial measures get into evidence  
10 in this situation?

11 MR. AMEDEE: We are only talking about tow things here.  
12 We are talking about a label that came out in January of 2000  
13 and the overall inaccessible program in general, limited  
14 accessible program. And first off, in my view this is not a  
15 remedial measure, just a decision to market this product in a  
16 different manner. Limited accessible program is obviously  
17 important in this case because it is an acknowledgement by the  
18 company that this product was unreasonably dangerous and  
19 shouldn't be on the market. Knowledge by the company that an  
20 adequate warning just couldn't be given about this product.

21 There is a question in one of the depositions, and I  
22 can't think of it right now; I think it might be Mr. Prudent's  
23 where he is actually questioned about whether or not statements  
24 were made to him by the FDA as to whether or not you could  
25 really give an adequate warning about this product, and this

1 jurisdiction that permitted punitive damages, and if one were  
2 to look at that question about profit and so forth, it might  
3 have some relevance. But I don't understand what the relevance  
4 of it is in the context of a failure-to-warn case.

5 THE COURT: Let me see what the plaintiffs say. Why do  
6 you want 91 through 93 in? What does that have to do with it?

7 MR. AMEDEE: It shows motive obviously. One of the  
8 issues that we are going to raise is that this product stayed  
9 on the market much longer than it should have. These are in  
10 the promotional materials. These are documents internally  
11 showing celebrations of \$2 billion of sales. Number 92 says  
12 stay positive, make Propulsid money. They all lead up to 93  
13 which says spend more time selling, less time on safety. And  
14 they show that safety and recognition of risk associated with  
15 this product were ignored and put aside in favor of profits. I  
16 think that's relevant evidence in this particular litigation  
17 especially given the fact that had the drug ben taken off the  
18 market four months sooner Mr. Diez might not be dead today.

19 THE COURT: Do you want to respond to that?

20 MR. IRWIN: Yes, Judge. I do remember one of the  
21 documents. One of them talked about a party that Janssen was  
22 going to hold to celebrate \$2 billion in sales. That \$2  
23 billion in sales was for all of the Janssen products, not  
24 just -- and other documents show that the party was cancelled  
25 and never held. And to me maybe this is a 403 question, but

1 appropriate to take up right now is the one that relates to  
2 marketing materials. This is the motion to exclude evidence  
3 consisting of marketing materials.

4 THE COURT: I have it. These are as a result of the --

5 MR. IRWIN: Refined exhibit list there are four  
6 exhibits at issue as I appreciate it. They are Plaintiffs'  
7 Exhibits 90, 91, 92 and 93. These exhibits are business plans,  
8 sales strategies. They also have some numbers and sales  
9 numbers in them. I think I can be a little more specific about  
10 them. I have got the right ones.

11 THE COURT: 225, 231 and 232, 332, 52, 91 through 97,  
12 161, 172.

13 MR. IRWIN: That is correct, Judge. However, when Mr.  
14 Amedee streamlined his exhibit list, it reduced those exhibits  
15 at issue to 91, pardon me, Judge, 90, 91, 92 and 93. I'm sure  
16 he will correct me if I'm misstating that. But I think that  
17 those are the exhibits in question.

18 THE COURT: Okay.

19 MR. IRWIN: These exhibits are, and it is hard for me  
20 to understand really why these have been selected and why the  
21 suggestion is for relevance, but these exhibits again are  
22 marketing materials. And there is not connection between Dr.  
23 Prejean and these various selected materials about bid plans,  
24 what the number of dollars were that were expected to be earned  
25 from the sales of Propulsid. I guess that we were in a

1 trying to stay out of the rain under says that we can't  
2 penetrate that. We have a company that was in contact,  
3 interaction with the FDA. We have meetings that were properly  
4 recorded that were even though "that they have a low-level FDA  
5 employee who recorded the minutes who is not an MD" but the  
6 fact of the matter is the investigators that were at those  
7 meetings prior to any final version looked them over, approved  
8 them, and they actually came out as a report, as a record of  
9 those meetings.

10 And I don't think that Dr. Lumpkin said something at  
11 meetings that he didn't mean to say, that was taken out of  
12 context, that he would have allowed it in the final version of  
13 those meetings. They are obviously subject to the exception  
14 because they are public record. They are trustworthy. I mean,  
15 if they are not trustworthy, then what is? The government  
16 record of its own meeting, its own minutes is not trustworthy,  
17 then I don't know what could be.

18 And they are obviously relevant in proving the  
19 plaintiffs' case under the LPLA. They address efficacy. They  
20 address writs. They address whether or not this product is  
21 unreasonable dangerous. And they only have two of them, and  
22 they do address adequacy of warnings.

23 The COURT: I will look at it again. I will rule on it  
24 either before or during trial.

25 MR. IRWIN: Your Honor, a motion that's probably

1 in that case the court admitted minutes of meetings with the  
2 FDA and as a government record, and I wanted to make sure that  
3 we pointed out at least two things about. In the E.I. Lilly  
4 case it was in an injunction proceeding, and Judge noted his  
5 opinion that the rules of evidence were relaxed. And so I  
6 think that clearly that that would demonstrate something here  
7 in front of a jury.

8 Then number two, those minutes in that E.I. Lilly case  
9 were minutes that were actually reviewed by Lilly. So Lilly  
10 was given the chance to review the minutes that were prepared  
11 by the FDA and say yeah or nay over those minutes. And so  
12 again, that addressed itself to the hearsay question, and we do  
13 not think that this passes the hearsay test. And we will await  
14 your Honor's ruling. We will address the notice question at  
15 the appropriate time.

16 THE COURT: In the Lilly case, unless I'm confusing it  
17 with another case, I think that those minutes had something to  
18 do with what the defendant said or what the parties said as  
19 opposed to what was said to them.

20 MR. IRWIN: I think that's right.

21 MR. AMEDEE: That's another case and another argument.  
22 The problem here is that I have a hard time reconciling the  
23 defendants having things both ways. Our argument about the  
24 alternative product design and the Buckman we know what we are  
25 prohibited from doing. And we know that this umbrella they are

1 to make a controversial statement to provoke dialogue. It was  
2 intended to provoke discussion in meeting. So let's say  
3 something that is one extreme, and then we will say something  
4 that's on the other extreme, which is often the way to conduct  
5 the meetings. And we will see where the discussion leads us.  
6 And so is that notice? I don't think that's notice. Is it  
7 prejudicial? I think we get to the 403 question. I'm mindful  
8 of what your Honor said.

9 THE COURT: That's where it is at in 403. I don't know  
10 where it is hearsay, because they are not offering it  
11 necessarily for the truth, but it is a question of whether it  
12 is misleading to the jury or confusing to the jury. When  
13 people sit around a meeting brain busting all of the areas,  
14 that's where it is at. I think, anyway.

15 MR. IRWIN: Well, your Honor, and I think the word  
16 brain busting is a good work, and I think that is a part of our  
17 concern about it. It certainly is a 403 concern, and it  
18 certainly goes to what Judge Duplantier said in Smith v. Isuzu.

19 THE COURT: It could well.

20 MR. IRWIN: Preliminary issues. So we will be guided  
21 by your comments in that regard. Let me just mention one other  
22 thing that I saw in my notes, and this goes not to the notice  
23 question, Judge, but it goes to the hearsay question. And that  
24 is one of the cases that the plaintiff cited was the Lilly  
25 case. And in the Lilly case, the case was Zenca v. E.I. Lilly,

1 an authority granted by law.

2 So you look to whether they had authority to make  
3 factual findings pursuant to an investigation. And these  
4 meeting minutes certainly are not factual findings pursuant to  
5 an investigation.

6 THE COURT: But aren't the plaintiffs arguing that the  
7 reason they are admissible is notice, not necessarily finding.  
8 They are taking the position that this is significant, this is  
9 relevant because Propulsid -- people sat around talking about  
10 it; the government asked these questions, and they say that  
11 Propulsid, people should have done something after they asked  
12 the question, or at least they were on notice, and they should  
13 have done some action or done something. Isn't that their  
14 whole thrust of this?

15 MR. IRWIN: I think that's part of the argument, Judge.  
16 So then it would, then they would suggest if it does not come  
17 in under an exception to the hearsay rule, it is not being  
18 offered as a government record, it is not being offered for the  
19 truth of the assertion; therefore, it is not hearsay. And if  
20 that is their position, then our view would be that it is not  
21 trustworthy. Because the statements that are attributed to Dr.  
22 Lumpkin, for example, cannot be cross-examined by us. It will  
23 promote and it will require that we call in witnesses to  
24 explain that as we described in our brief, our witnesses who  
25 were at the meeting would explain, well, Dr. Lumpkin was trying

1 representative of Janssen. It involves a discussion among  
2 other things about the decision to withdraw Propulsid and to  
3 cease commercial distribution of Propulsid is what we described  
4 it in the brief and also to implement the limited access  
5 program. These are two things they are talking to in the 403  
6 motion.

7 But I think the issues here are whether these minutes,  
8 routine minutes of meetings are government records. That's  
9 really the question here. And we have referred to your 803(A),  
10 which is obviously the rule that would control here. And  
11 clearly these are not minutes of the activities of the office  
12 or the Adeoshun case that delineates that. Cases that are  
13 examples of things that document the activities of the office  
14 are cases that show whether the agency holds meetings, whether  
15 the agency receives official reports, whether the agency issues  
16 things. Activities of the office are not things such as  
17 interoffice meeting, and the course of conversations between  
18 people is more of an official function. That is 803(A) and  
19 803(B).

20 803(D) are those matters observed pursuant to the  
21 entity and imposed by law, whether it was duty to report. And  
22 clearly that provision does not apply to this circumstance.  
23 The only one that would arguable apply is, of course, (C), and  
24 that is the circumstance where in civil actions factual  
25 findings resulting from an investigation are made pursuant to

1 consider the FDA meeting minutes. Would it be proper for me to  
2 address that one?

3 The COURT: Yes.

4 MR. IRWIN: There are two documents in issue. Again,  
5 since we filed these motions in limine and Mr. Amedee and I  
6 have reviewed depositions and exhibits, he has trimmed down his  
7 exhibit list. So we now have two exhibits at issue. They are  
8 6 and 12, Plaintiff's Exhibits 6 and 12. And Plaintiff's  
9 Exhibit 6, your Honor, we refer to on page three of our brief.  
10 Those are meeting minutes from the FDA dated March 27, 1998.  
11 The purport to commemorate a meeting between the FDA and  
12 representatives of Janssen. Of the things that is referenced  
13 in these FDA minutes is a statement by Dr. Murphy Lumpkin, one  
14 of the FDA deputy directors. And the statement that is  
15 attributed to Dr. Lumpkin in these minutes is "Cisapride.  
16 Basic question: Is it acceptable for your nighttime heartburn  
17 medicine, i.e., something for which you can take Tums to have  
18 the potential to kill you?" I know you have heard about that.

19 THE COURT: That's what the plaintiffs have been  
20 asking.

21 MR. IRWIN: Yes, sir. They have referenced that  
22 before. And the other document is, I believe, the minutes from  
23 March 9, 2000. These minutes refer to -- should I have that  
24 right -- these minutes refer to a meeting between Dr. Houn, if  
25 I am pronouncing that correctly, Dr. Janet Woodcock and some

1           THE COURT: In that regard let's see if that's the  
2 situation so a 901 stipulation can be made. I'm not saying  
3 that gets you past the hearsay because it may not. But if it  
4 is just a question of a perfunctory §10 that there ought to be  
5 a way of at least shortcoming some of that with the parties.

6           MR. IRWIN: We would agree on that as far as  
7 authenticity 901 of the DD Mack letters 168 and 170. We have  
8 great reservations and do not agree at all that that applies to  
9 803(6).

10          THE COURT: All right. That's the way I see working  
11 out the 901 situation, because really the stamp of the  
12 government just goes to 901. It doesn't go to admissibility,  
13 it just goes to authenticity. So that I don't need to get  
14 somebody down to say, yes, that a government-issued letter.  
15 But that's one way of doing it.

16          In this particular case I just don't see that these  
17 documents have any part in this particular fact pattern or that  
18 the testimony I have reviewed indicates that. I don't even  
19 know whether the doctor really knew that there was and DD Mack  
20 correspondence much less that correspondence. In fact, I had  
21 the feeling I didn't even know whether he knew with the DD Mack  
22 correspondence was until this cropped up. So I don't see this  
23 playing a part. I would exclude those.

24          MR. IRWIN: Your Honor, the similar motion that  
25 addressed some of the same subject probably would be able to

1 agency's attention by a competitor or by consumers or by anyone  
2 who finds them offensive. And that's how things often come to  
3 the agency's attention and to their concern.

4 So the fact that these documents were sent to FDA at  
5 one point does not necessarily mean that the FDA was giving a  
6 preliminary, prior stamp of approval to these materials before  
7 they were actually disseminated. Now, I don't know whether Dr.  
8 Prejean in this case since I was not involved in the particular  
9 case saw any of these promotional materials or whether he saw  
10 simply identical materials, whether he saw the letters or  
11 whether or not he should have seen those letters. Those are  
12 other matters. But just the fact that the letter were issued  
13 does not mean that the materials were never disseminated.

14 The only thing I wanted to address is the government  
15 records issue under 21 CFR 20.3, the DD Mack letters, minutes  
16 of meetings that are written by FDA. FDA letters can all be  
17 certified as authentic government records. It is a \$10 fee and  
18 you submit it to the agency. They will put a red ribbon on it  
19 and it becomes an official government record. Now, that's  
20 something that the plaintiffs' steering committee or Mr. Amedee  
21 could do, and we are hoping that it is unnecessary that we have  
22 to send \$10 for every document to the agency to have those  
23 authenticated as official government records. But obviously if  
24 we need to do so, we would appreciate some advice about that as  
25 well.

1 make it as a government record, 803(6) is not a safety valve  
2 that you resort to, then get the document in as a business  
3 record. And that's United States v. Kanan.

4 And then finally, of course, it can't come in as a  
5 so-called business record for a regularly conducted activity  
6 until there is a custodian that can identify it as such. So I  
7 find your remarks earlier today about 401 and 403, but I think  
8 that no matter where you come down on the analysis under 803  
9 and 803(6) this fails the most basic test because there is no  
10 connection to Dr. Prejean. Thank you.

11 THE COURT: You had another remark?

12 MR. PARR: I'm Edward Parr. I'm with the Mathis firm  
13 of Washington, D.C. I had a chance to speak to you before.  
14 There are just some things I wanted to clarify for the record.  
15 First of all, with respect to the submission of promotional  
16 materials to the Food and Drug Administration, it would, in  
17 fact, be a prior restraint and rescission of the  
18 constitutional, in fact, if the FDA were required to preapprove  
19 all promotional materials. It does not. So the regulations  
20 require that the promotional materials, thousands and thousands  
21 of them no doubt get submitted to the agency every year. And  
22 whether or not a particular item gets reviewed prior to its  
23 actually being disseminated is entirely a matter of chance.  
24 Many promotional materials are sent out and used in the  
25 ordinary course of business, and they are brought to the

1 Highway Department finding those letters were preliminary  
2 viewpoints of government officials and they were constituted an  
3 exchange between Isuzu and that government agency about safety  
4 issues. Now, none of those documents rise to the level of 803  
5 that is clear. So one of the hearsay questions that the court  
6 has to address whether this is admissible as an exception to  
7 the hearsay rule under 803(A), and clearly it is not.

8 A brother judge of yours has found and it was affirmed  
9 by the Fifth Circuit. And there are lots of other cases we  
10 cited.

11 If I might just look at my notes, I think that  
12 concluded my remarks. I will make one remark about business  
13 records and this remark will apply to some other motions we  
14 have made. I will not reiterate it, but it didn't pass the  
15 government record test, which it clearly does not. We should  
16 not then resort to 803(A), this sort of catch-all to get it in  
17 as business records.

18 I could go through the hearsay rule, trustworthiness  
19 rule, and when I use the word trustworthiness in the context of  
20 the government records I am not suggesting that the government  
21 or the government per se is untrustworthy. I just mean that  
22 these documents were not compiled with the sense of regularity  
23 that one would expect a demand to satisfy the trustworthiness  
24 requirement. We have cited to your Honor at least one case  
25 which I am trying to call up here that says that if you can't

1 fairly disclosed to him. He had no problems with the  
2 information that was given to him.

3           Instead, what we have here are some letters which are  
4 expressed to be informal opinions. They are untitled letters.  
5 We gave you regulations on that. And they reflect an exchange  
6 of the viewpoint between the FDA and the company on certain  
7 promotional materials totally unrelated and totally unconnected  
8 to Dr. Prejean and Mr. Diez? And I will digress for a moment  
9 if I might, please. As Mr. Amedee said earlier, we were  
10 talking about the ultimate design motion, he made the reference  
11 to the fact that promotional materials are not relevant in  
12 Louisiana cases.

13           And that is true. We don't have a negligent  
14 promotional claim here in Louisiana. Some states do. But that  
15 makes it drive the point home all the more clearly that  
16 whatever promotional material we are talking about here number  
17 one you have got to connect them to Dr. Prejean, and there is  
18 not connection.

19           Then we go back to this request from these letters,  
20 informal expressions of what preliminary views by the FDA on  
21 promotional materials. And they clearly are. And they are  
22 untitled letters, and we waste that throughout and provided  
23 that information to your Honor about it and relied on the case  
24 of Judge Duplantier, Smith v. Isuzu case where he excluded  
25 letters and communications from the National Transportation and

1 defendants are relying upon the FDA. It is a blanket umbrella  
2 and I think what the DD Mack letters illustrate is what should  
3 be in their particular labels. And there will be obviously  
4 probative for us to prove whether or not they did, in fact,  
5 comply adequately.

6 THE COURT: Let counsel respond. I will let you confer  
7 with counsel, and if you have anything to add I will let you do  
8 that.

9 MR. ARSENAULT: Just so the PSC would have a chance.

10 THE COURT: I will give you an opportunity.

11 MR. IRWIN: These promotional materials, whatever they  
12 may be, they are the very core of this issue here is that  
13 whether they were relied upon by Dr. Prejean.

14 THE COURT: Nobody sees them but the office and you?

15 MR. IRWIN: Dr. Prejean has never sen these documents  
16 number one. And number two any of the promotional materials  
17 are the subject of this exchange between the FDA and the  
18 company about these promotional materials. He never saw nor  
19 did he ever rely on those promotional materials. We  
20 specifically asked him at his deposition what materials have  
21 you reviewed from the company, what materials have you reviewed  
22 from the company, what materials have you relied on? Were any  
23 of these materials ambiguous? Did any of these materials fail  
24 to disclose to you the risks? I know you have seen all of that  
25 testimony. And he said that he thought it was all fully and

1 had lack or fair balance. And there is going to be an issue in  
2 this case regarding whether or not adequate warnings were given  
3 for all concomitants. It listed a group of drugs that were not  
4 to be taken with Propulsid. There were also other drugs in  
5 that category, numerous other drugs that they didn't warn  
6 about. So these two letter will show that prior to Mr. Diez's  
7 death the company was put on notice about that particular  
8 aspect of this case. And for that reason and that reason  
9 only --

10 THE COURT: The problem with the DD Mack letters though  
11 is that before any advertisement goes out from the drug  
12 manufacturer to float it past the division of drug marketing  
13 act or advertising communication department, they send them the  
14 material. They get some writing from them preliminarily. They  
15 haven't even sent it out yet, haven't been advertised it. Yes,  
16 they want to know whether or not they can advertise it so they  
17 say this is what we propose to do. And they give input from  
18 the office, and whether or not the input is valid or they agree  
19 or disagree, they change their advertisement and did something  
20 to it. It is really a preliminary operation is the way I  
21 understand it. Unless I'm missing something. That fact that  
22 they have given that information, they simply are saying this  
23 is what we propose to do. Help us out, give us some  
24 information. Isn't that what we are dealing with here?

25 MR. AMEDEE: That's what we are dealing with, but the

1 THE COURT: Okay.

2 MR. IRWIN: Does your Honor have any particular order?

3 THE COURT: No. I will listen. You bring them to me  
4 the way you want them.

5 MR. IRWIN: Can we take up the DD Mack motion first?

6 THE COURT: Yes, okay, I have it.

7 MR. IRWIN: Judge, our motion addressed originally four  
8 DD Mack letters.

9 THE COURT: Let me interrupt you. Let me get a  
10 response from the plaintiff on that. Why are these admissible?

11 MR. ARSENAULT: Let me on behalf of the PSC, I want to  
12 reiterate so that the record will be clear and rather than  
13 stand up for every one of these motions, the PSC would offer  
14 the same argument that Mr. Levin made previously.

15 THE COURT: All right.

16 MR. AMEDEE: This will be very brief. The DD Mack  
17 letters and this is speaking only for these two cases that I am  
18 interested in, are DD Mack letters. I think they are listed  
19 numbers 168 and 170-71. And I think 170 and 171 are both the  
20 same document. And these are three public records that address  
21 a specific a cause of action of the plaintiff, namely, the  
22 warnings and whether the warnings were adequate. And those  
23 show notice. These letters were written to Janssen recording  
24 that warnings they point out that certain brochures and other  
25 materials contained in their warnings did not contain a -- they

1 not have died of a heart attack. And we are asking the jury to  
2 make an arbitrary choice between which they like the best.  
3 That's not good science and it is not proper science.

4 And so we are asking them to roll the dice, and they  
5 are the lest expert people to do that. That's where your  
6 gatekeeper function comes in.

7 THE COURT: I understand your argument. I understand  
8 where you are coming from and I understand the plaintiffs'.

9 MR. MURPHY: Thank you.

10 THE COURT: I appreciate your views. You make a strong  
11 point, and you have got an interesting case and a good theory.  
12 I understand the issue. I have had it before me. I have read  
13 it. I have looked at all of the documents, and I am familiar  
14 with this issue. As I said, in this case I see that there is  
15 some evidence to indicate that he had no cardiac incident  
16 before, had no ischemia before, was taking Propulsid for a  
17 period of time, had at least one documented instance -- whether  
18 or not his is valid, it is one document instance that he had  
19 QTC interval prolongation. He dies while he is taking this  
20 drug. The death is relatively rapid. He is DOA, was dead in  
21 the ambulance even. It is a question of fact for the jury. I  
22 don't see it as a question of law. So I will deny the motion.

23 Okay. Let's deal with the other matters before us.  
24 Any argument on any of them?

25 MR. IRWIN: Briefly, your Honor.

1 risk factor. We can ignore that one. But now let's look at  
2 what happened after he stopped going to Dr. Prejean. He has  
3 these three to four incidents of gasping for breath  
4 inconsistent with torsades. Because he doesn't get torsades  
5 that way. That didn't present as torsades. You would be on  
6 the floor if that were torsades.

7 And then he gets chest pains a week before he dies. So  
8 now we are up to 18 risk factors if you have been keeping count  
9 with me, Judge. Chest pains within a week of his death,  
10 spontaneously reported by his wife in the medical record and  
11 told to the people who were caring for him at the time when he  
12 was critical to be accurate.

13 And so, Judge, you have got all these risk factors.  
14 You have got arm pain. That's the last one. So you have got  
15 19 risk factors that point to the fact that this man had heart  
16 attack. So taking this to a differential diagnosis, in order  
17 for a doctor, any doctor, to say to a reasonable degree of  
18 medical certainty that it was something other than a heart  
19 attack you have got to rule it out. It is important for any  
20 reasonable doctor who is not an advocate for a position, I'm  
21 talking about a dispassionate scientific exercise over which  
22 you are the gatekeeper to be unable to rule out the fact that  
23 that man died of a heart attack. And so we are in the  
24 anomalous position of sending a case to a jury where the man  
25 cannot be said by any doctor, ever their doctors, that he could

1 left are simultaneously. And she is going to testify that it  
2 was about a minute or two minutes between left arm pain and his  
3 complaint about it and his collapse right there. And all the  
4 experts agree that when you die of a heart attack, fibrillation  
5 takes place after the heart attack. That's why they have had  
6 fibrillation machines where you strap on your chest and say  
7 clear and try to get your heart pumping back again. I just  
8 wanted to clear that up.

9 But he had a base factor for the heart attack. They  
10 are not disputed risk factors. These bad habits he had for a  
11 long time. Age is a factor. Gender: Males have a higher risk  
12 of heart attack than females. Family history: Uncle died of a  
13 heart attack. Smoking: Thirty, 40 years two packs a day.  
14 Chest pains for approximately one year. That's five. H.pylori  
15 bacteria in his stomach. That's six. High bad cholesterol,  
16 that's seven. Low good cholesterol, that eight. High or bad  
17 high fat diet of long duration, that's nine. No regular  
18 exercise, that's 10. Shortness of breath on exertion of  
19 dyspnea as it is called, that's 11.

20 EKG in 1994 showed t-wave abnormalities which Dr.  
21 Prejean testified as suggestive of ischemia. 1998 EKG showed  
22 t-wave; 1999 EKG during the stress test showed abnormalities  
23 suggestive of ischemia. So we are up to 14. You have been  
24 keeping count with me, Judge?

25 Now, he wouldn't go to the doctor. That's a very high

1 in that an autopsy would not have revealed blockages. It is  
2 not going to come from your experts. They are going to testify  
3 unequivocally that autopsy would have revealed blockages.

4 Number two, they are going to testify that the autopsy  
5 could have revealed arteriosclerosis. And Dr. St. Martin in  
6 particular is going to testify that the likely cause of death  
7 was what they call a plaque that had ruptured.

8 THE COURT: The only thing it would not show is the  
9 fibrillation?

10 MR. MURPHY: That's right.

11 THE COURT: Fibrillation is pretty much caused by the  
12 block?

13 MR. MURPHY: That's exactly right. Let me back up a  
14 second to the night he died. And this is significant. He is  
15 at a friend's bar. He had just finished going into an  
16 apartment with a friend and took a tray into the apartment.  
17 And there as soon as he finished taking the tray, he had that  
18 sharp pain in his left arm. That's not torsades. Torsades  
19 doesn't present as pain. You are not going to hear expert  
20 testimony say that torsades causes pain. Doesn't cause chest  
21 pain. Doesn't cause left arm pain. That's a heart attack.

22 And the evidence will show that his friend, a lady,  
23 teased him because he was suddenly complaining of this left  
24 arm. And he said, "I don't know what's wrong." And then after  
25 complaining of left, his left arm, he grabs his right arm and

1 As far as litigation, she didn't have the money to do it.

2 An interesting fact, though, is that the testimony will  
3 show that since Mr. Diez died within an hour of his having his  
4 attack more likely than not it would not have shown up on that  
5 autopsy. Thank you.

6 THE COURT: Where was he when he died?

7 MR. AMEDEE: At a friend's bar and lounge. He was not  
8 a drinker. He had stopped by there with his son earlier in the  
9 night, dropped his son in front of the house. He was on his  
10 way home and he stopped at Terry's Lounge and the caterer -- he  
11 was in the back -- there is a catering operation of the bar and  
12 restaurant talking to a young lady who was fixing sandwiches  
13 for a wedding the next day. That's when he just fell down into  
14 unconsciousness.

15 There are 14 -- I listed contested and disputed  
16 material issues of fact in this case. And unlike -- they are  
17 not 14 risk factors -- he had some but he didn't have 14 of  
18 them.

19 THE COURT: Do you know if he was DOA on arrival?

20 MR. AMEDEE: Yes, he was. I think that Mr. Irwin will  
21 agree that the ambulance driver's testimony was that he was  
22 dead in the ambulance. Thank you, your Honor.

23 THE COURT: Okay, thanks.

24 MR. MURPHY: I will start with the last point first.  
25 Number one, I don't know where the testimony is going to come

1 limits. Dr. Neotime testified that pre-stress test blood  
2 pressure readings will ordinarily be high especially for a  
3 person who hasn't taken one before.

4 THE COURT: Do you know if Mr. Diez was on Propulsid at  
5 the time that he died?

6 MR. AMEDEE: No, he had this prescription filled in on  
7 October 13th, which was just 11 days before he died. And the  
8 history, he had a pretty steady history of having it renewed.  
9 He was, we call it a mathematical computation of the number of  
10 pills that he was prescribed over a six-and-a-half month  
11 period, number of pills, number of days, that's 41 or so. So  
12 there was left in the bottle and came down to like five to six  
13 pills a day.

14 His wife said he too, his medication for symptomatic  
15 relief of his symptoms. So, therefore, sometimes he might take  
16 more than five a day. I would guess there are days when he  
17 took more, days when he took less.

18 I want to talk one second about the autopsy. No  
19 autopsy was performed, and the testimony is going to establish  
20 that Mrs. Diez was told at the hospital that she didn't need an  
21 autopsy and that this is a cyclical thing. I'm sure the  
22 doctors at the emergency room said that guy died of a heart  
23 attack. They didn't know he was on Propulsid at that time. It  
24 was not known that Propulsid could cause the problems that he  
25 had. They didn't know in the emergency room at West Jefferson.

1 Propulsid. Our burden of proof at the point is not to show  
2 that he did one or the other, but it is more likely so. And at  
3 this point that is a question of fact that he did so.

4 Had the normal QT. He had normal stress test. He also  
5 had a normal echocardiogram. His treating physician prescribed  
6 his Biaxin and Propulsid for a 10-day period. But he was off  
7 Biaxin for six months. So obviously that had nothing to do  
8 with the combination of those two drugs -- long out of the  
9 system.

10 We have had the argument of half lives. We know that  
11 there is no drug that could have stayed in his system that  
12 long. He was, however, on a drug, Provosay, which was a 450  
13 inhibitor that was not warned about. That will be an issue in  
14 this case.

15 Both of these experts did a differential diagnosis by  
16 evaluating Mr. Diez's risk factors. He did smoke for 20 to 30  
17 years one to two packs a day. The fact of the matter is he  
18 quit, not months but a year before. Dr. Eckberg says that is  
19 relevant. Many of the ill effects associated with smoking had  
20 ceased.

21 Didn't have high blood pressure. You look at the  
22 brief. He had high blood pressure on that one occasion before  
23 the stress test, and he had three readings of normal blood  
24 pressure over the course of his treatment with Dr. Prejean  
25 April 1st, April 14th and April 23rd. All were within normal

1 one of these experts had access to the actual monitors, the  
2 stress tests when they rendered their reports. But what they  
3 relied upon is the results of that test, namely, no arrhythmia,  
4 no chest pain, 11 minutes on the actual treadmill, two minutes  
5 into the Bruce protocol.

6 Now, granted there was six months before Mr. Diez died.  
7 And that's relevant, but it is also relevant in that his QTC  
8 was not elevated then. We don't know if his QTC was elevated  
9 six months later, the day he died. But if that's the case,  
10 there remains the argument with regard to the design defect.  
11 If the only way that a person can prove that they died from or  
12 that their relative died from taking Propulsid is to have a QTC  
13 measurement at the time of the death, there would never be a  
14 case proved in this state or any other because nobody is going  
15 to be on a monitor at the time they die.

16 So you have to look at other factors. The Propulsid  
17 relationship certainly is something you have to take into  
18 consideration. The man was taking the drug at the time. He  
19 was taking an average of five to six pills a day. Reason to  
20 believe it was a Friday night. Didn't have to go to work the  
21 next day. Had he had to work, he might have taken his more  
22 prescribed dose, the seven or eight of them that day. But the  
23 fact of the matter is he either died of one or the other.

24 And I agree with counsel there that he either died of a  
25 heart attack or he died of an arrhythmia event associated with

1 state of medical knowledge. It is not simply Dr. Shell's  
2 discretion to ignore the body of science and come up with  
3 something new and say I'm going to experiment on this jury at  
4 Janssen's expense. You have got to be the gatekeeper, Judge.  
5 You have got to be the gatekeeper to decide whether or not he  
6 could ignore the sandwich of the normal QT coming in, normal QT  
7 coming out. You have got to be gatekeeper to determine whether  
8 or not he could soundly ignore the confounding factor of the  
9 Biaxin if there were a prolonged QT. He has got to rule out it  
10 was a combination of Biaxin, because he said Propulsid alone  
11 killed this man. So that's apples and oranges.

12 So he has got a QT. There is no controversy that the  
13 QT is measured with Biaxin and Propulsid. So can you rule it  
14 out and then by his own admission find it? Can you rule it out  
15 that it was nothing but a normal variation given the necessity  
16 of doing that? Because he presented with a normal EKG on the  
17 14th and he leaves with a normal EKG on the 14th. And by  
18 normal I mean the QTC interval.

19 THE COURT: Okay. Let me hear your opponent. I will  
20 give you an opportunity to respond.

21 MR. AMEDEE: The stress test of April 14th is the  
22 ultimate red herring in this case. And I don't mean it by  
23 saying that it is not important to Mr. Diez's case because it  
24 certainly is. Both experts, Dr. Shell and Dr. Eckberg, relied  
25 upon this stress test but not the QTC measurements. Neither

1 the way he did if he were not on Propulsid. But that's the end  
2 of the case because the cases inform that there has to be a  
3 reasonably conducted with proper methodology following  
4 differential diagnosis by the physicians that the plaintiffs  
5 call. And if the differential diagnosis is flawed and as a  
6 result of the flawed diagnosis you can't rule it out, they  
7 don't go to the jury, because then we are letting science go to  
8 the jury. And the whole point of Daubert now that I am down  
9 here in Mississippi, I mean Louisiana --

10 THE COURT: Close enough.

11 MR. MURPHY: Now that we are down here in Louisiana  
12 that's the essence of Daubert. That is we can't let bad  
13 science go to the jury no matter how well intended. How in the  
14 world is that a scientific basis for saying that although this  
15 man came in with a normal QT on the 14th, walked out with a  
16 normal QT on the 14th that by some cause that they cannot  
17 explain, some non-speculative cause for which they have no  
18 evidence that he had a prolonged QT on the day he died? That  
19 being the only cause of the disease they diagnosed torsades.  
20 And so there isn't a question of permissible inference that  
21 gets them over the top. It is a question of an absence of  
22 enough evidence to infer that, that this QT was obtained by  
23 methodologically incorrect means.

24 And you are the gatekeeper. You have got to decide  
25 whether or not the bizalan formula was applicable given the

1 they need these bypass operations. Lo and behold they have a  
2 heart attack. And so we can't let this case go to the jury on  
3 guesswork or speculation.

4 In order for it to go to the jury, there has to be  
5 medical testimony from their doctors which rules out a heart  
6 attack by appropriate methodology. So that's why it is Daubert  
7 question. That's why it is insufficient.

8 Now, let's look at their methodology. They say  
9 contrary to all medical authority that the stress test rules  
10 out that he had cardiovascular disease, the kind that causes  
11 garden variety heart attack. Couldn't possibly be true. And  
12 so we have two methodological issues here and science issues,  
13 whereas in your role of the gatekeeper you have got to  
14 determine whether or not it was sound science to measure that  
15 QT, whether the QT was capable of being measured, whether it  
16 was sound to ignore the rest of the QTs on the 14th and the  
17 recovery on the 14th. Was that sound science? Or did the  
18 doctor have to rule out what he saw? Was it sound science to  
19 say on the basis of the entire medical record that you can  
20 ignore, you can ignore that rewrite and rewrite that and be  
21 able to rule out the obvious cause of the man's death?

22 Now, let me get back to the autopsy. Bot Dr. Shell and  
23 Dr. Eckberg, and Eckberg is the only one that comes to mind  
24 specifically who said that he couldn't rule out the fact that  
25 the man would have died of good ole garden variety heart attack

1 deposition that was it and by everybody else.

2 Now, let's go back to the stress test as I promised a  
3 few minutes ago I would. The stress test itself does not rule  
4 out a heart attack. There is a document we filed -- it is the  
5 disclaimer/inform consent document. And if you look at the  
6 bottom it says three things. It says number one don't get  
7 false hopes about the fact that this stress test didn't show  
8 any cardiovascular disease because it is only 60 to 70 percent  
9 accurate. And there is another test that can actually factor  
10 accuracy factor up to 85 percent, but the only test that's  
11 completely accurate for the presence or absence for  
12 arteriosclerotic heart disease is the angiogram. And Dr.  
13 Neotime so testified. In fact, Dr. Neotime, and it is not a  
14 contested fact because he is a disinterested doctor, he is not  
15 on either side's pay, he said that he has had cases where  
16 people pass the stress test with flying colors and died of a  
17 heart attack and he had blockages. And who passed the stress  
18 test?

19 I think this is a more accurate statement, passed the  
20 stress test. And it was determined later by one of the more  
21 accurate tests that he had actual blockages in their heart.  
22 Now, I think there is enough known about this to know many  
23 people who have been in that situation. We have got close  
24 friends who have been in a situation where they have been  
25 walking around after passing the stress test, and lo and behold

1 little of the good. He has a diet that has persisted for his  
2 50-some years of life, bad diet. He has no regular exercise  
3 program. And I know the plaintiff is going to try to say that  
4 has something to do with the nature of his work, but the point  
5 is he had the classic risk factors of a heart attack. You have  
6 got to rule that out before you can rule in something else.  
7 You have got to rule out the simplest cause, and if you can't  
8 do that you can't get anywhere.

9           There is another factor, the stress test itself. On  
10 the stress test he had abnormal t-waves both in 1994 and the  
11 stress test in 1999. There were other modalities consistent  
12 with ischemic heart problem meaning a lack of oxygenation. And  
13 no matter how they slice it, it is uncontested within two to  
14 three minutes before his death he was awakened in the middle of  
15 the night. His wife has testified that this was a new thing  
16 and he was gasping for breath. Gasping for breath is a form of  
17 ischemia, which is a lack of oxygen. So he is gasping for  
18 breath. There is no controversy that this could be torsades.

19           They try to manufacture one. Because if it would have  
20 been torsades, he couldn't possibly last for one minute or  
21 two -- he would be out, because the heart would have stopped  
22 beating. He would have collapsed. That didn't happen.

23           And so these three to four incidents of gasping for  
24 breath and in the answer they said that in terms of the chest  
25 pain reported by witnesses who had testified in their

1 caused by a prolonged QT. Torsades is only caused by prolonged  
2 QT. So it is one or the other, it cannot be both. And so they  
3 have the burden of ruling out that it was a heart attack. And  
4 there is traditional methodology that has to be done correctly.

5 Bear in mind there was no autopsy, none at all. How  
6 did they then rule out that he didn't die of a garden variety  
7 heart attack? And how is it anything other than speculation or  
8 theory, however inspired that speculation or theory may be,  
9 that gets them to the jury? They have no facts. They cannot  
10 have a scintilla of evidence under these circumstances other  
11 than scientific speculation that at the time he died he had a  
12 prolonged QT and that that QT alone, prolongation alone caused  
13 torsades which caused his death. Now that is not a question of  
14 disputed fact. That is a question of scientific methodology  
15 and insufficiency.

16 Because just think about it from a common sense point  
17 of view. You have got a guy that has presented with all the  
18 risks of a heart attack. He smokes two or three, I'm sorry,  
19 one to two packs a day for 30 to 40 years. He has only stopped  
20 in the last six months.

21 Fact number one: He has got high blood pressure,  
22 though they try to explain it, he had it, and nobody knows why.

23 Factor number two: He has bad amounts of bad  
24 cholesterol, and he has a low amount of good cholesterol. And  
25 so he has gotten it both ways, he has too much bad and too

1           Now, that raises the second big issue. How did you get  
2 from a guy who walks out of the stress test with no prolonged  
3 QT and minutes later a prolonged QT at the time of death?  
4 There is no explanation in the record or in the motion response  
5 for how that's anything but an intuition, a speculation or a  
6 theory.

7           This isn't a case where a person has a persistence QT  
8 where it is reasonable to infer that at a certain date in the  
9 future he is likely to have the same thing. And so the only  
10 prolonged QT he has is during this period where Dr. Shell chose  
11 the controversial measurement because the other  
12 non-controversial measurements were not available and where the  
13 QTs according to Dr. Neotime and Subselento and from Dr. Shell  
14 himself are normal. So there is a big problem, and that isn't  
15 an obvious thing because it wasn't obvious to us until we  
16 looked deeply at it, and we took Dr. Neotime's deposition.

17           And there is a third problem and there is an obvious  
18 problem. The third problem is how do you rule out as a matter  
19 of differential diagnosis that he died of the leading cause of  
20 death in America from those who don't take Propulsid? Now,  
21 there is a very subtle thing here. It is not subtle once you  
22 understand it, but it is subtle unless it is pointed out. And  
23 that is that you can't have a heart attack and torsades at the  
24 same time. They are two different animals.

25           A heart attack is caused by cardiovascular disease, not

1 unanimous that it is improper to measure QT interval on a  
2 stress EKG.

3 And he can't rule out, let's assume, let's give the  
4 devil his due, so to speak. He can't rule out that the  
5 prolonged QT is the combination of Biaxin and Propulsid and not  
6 Propulsid alone. Nobody in the world can do that, and he can't  
7 rule out his admission that there is a 95 millisecond variation  
8 in the normal heart in QT. So he can't rule out that it is a  
9 normal variation, not a Propulsid variation. He can't rule out  
10 that it is a Biaxin variation prescribed improperly with  
11 Propulsid.

12 And so right there it is a differential diagnosis is  
13 that QT interval meaning that it is a Propulsid-induced  
14 interval and that's not something else gone down the drain and  
15 his measurement of QT because it is not scientifically  
16 accepted. I mean, there are a whole host of studies, and Dr.  
17 Eckberg admitted that by the way, Dr. Eckberg said very clearly  
18 that he has no scientific support for the measurement that Dr.  
19 Shell made.

20 So you have a Daubert problem right there. Now, it is  
21 compounded by the following things: Daubert problem number one  
22 is that if it is a Propulsid-caused prolongation, why isn't it  
23 in the first EKG on the 14th? And why isn't it in the last EKG  
24 on the 14th? So literally you have got a man who walks out of  
25 the stress test with no prolonged QT.

1           Now, the first thing that was not in the summary is,  
2           and I suggest if you have ever taken a stress test you already  
3           know this, first thing they do before they stress your heart is  
4           they give you an at-rest EKG. No prolongation of the QT at  
5           EKG, number one. We are talking about April the 14th, no other  
6           date. They give him an EKG while he was exercising. And  
7           that's where you have the variation in the heart rate. And it  
8           is scientifically unsound and there is no medical literature to  
9           the contrary: To attempt to measure the QTC interval when the  
10          heart rate is varied. The only formula is bization formula.  
11          And the bization formula is inapplicable when the heart rat is  
12          varied. Now, that's not a disputed fact. That's a Daubert  
13          question. Because right there you have got to ask two things.

14                 And then there is a third factor. I'm going to fill  
15          you in on the third factor, which is that immediately after he  
16          was given an exercise EKG -- he is on a treadmill -- the next  
17          thing, the next EKG he gives the heart rate is now stable  
18          again. So you have got EKG number one on the 14th, stable  
19          heart rate. EKG number two on the 14th exercising, unstable  
20          heart rate. EKG number three on the 14th, stable heart rate.  
21          Guess what, Judge? Dr. Shell doesn't say QT is present in one  
22          or three. Now, unless he is a fool, he did the measurements  
23          for all three. He didn't like the first dimensions and he  
24          didn't like the last one. So he is stuck now with the only one  
25          he can measure, and that's the one where the medical opinion is

1           Let's back up for a moment, because I am going to fill  
2           you in on something that Dr. Neotime testified about that he  
3           only suspected shortly before. Dr. Neotime's deposition is  
4           very significant. You will recall in 1994 Mr. Diez had a  
5           normal EKG and normal QTC interval. On April 1st he goes for a  
6           normal QT interval and he presents as a heart patient to Dr.  
7           Prejean and Dr. Prejean believed that he had at least 14 risk  
8           factors for a heart attack. And there is not dispute about  
9           that, 14 risk factors, and I can name them in a moment.

10           Now, that's before Dr. Prejean put him on Propulsid.  
11           Well, what Dr. Prejean did next was wrong, and there is no  
12           dispute that the warning on the Propulsid label says you cannot  
13           coprescribe Biaxin with Propulsid. He did it. And at the time  
14           that the man presented for the EKG was asked what medications  
15           are you on. He was on, among other medications, Propulsid and  
16           Biaxin.

17           Now, Dr. Shell has said in his report that what happens  
18           when you are on Biaxin and Propulsid at the same time is that  
19           Biaxin because it inhibits the metabolism of Propulsid  
20           effectively increases the dosage three times normal. So when  
21           the man presents at the stress test, and Dr. Shell cited the  
22           study that's in there, and the man presents at the stress test,  
23           he is on a prohibited combination of Biaxin and Propulsid. And  
24           his effective dose is at least three times normal does of  
25           Propulsid.

1           THE COURT: But it is a malfunction of the ventricular  
2 aspect.

3           MR. MURPHY: No. This is an important distinction.  
4 Torsades is the resting heard goes de-dum, de-dum, de-dum. But  
5 torsades causes the, and it is only caused by the QT and  
6 nothing else. Torsades causes the heart instead of that  
7 regular sinus rhythm to go da-da-da-da. And it is literally  
8 stopping the pumping of blood immediately upon the onset of  
9 torsades. And because it stops pumping blood, a clinical  
10 setting can be seen and measured. But pitch is showing the  
11 heart looking like a bag of worms instead of actually pumping  
12 blood. So torsades is a unique type of fibrillation that's  
13 caused by a timing problem, which the timing problem being a  
14 prolonged QT.

15           Now, the second thing that's interesting about torsades  
16 is when you get it, because the heart has stopped pumping, you  
17 remain conscious only as long as 15 seconds. And the third  
18 thing about torsades is something that resolves by itself. The  
19 heart just starts re-pumping, and sometimes it causes death.  
20 Now, these people have staked their claim that that man died of  
21 torsades, nothing else at the time he died. So the review you  
22 have got to show a prolonged QT at the time he died. You have  
23 got to show that it was torsades that killed him caused by the  
24 prolonged QT. You have got to show that prolonged QT was  
25 caused by Propulsid. There is no dispute about that.

1 says that the indications are that he had some ventricular  
2 fibrillation which precipitated or caused the decedent's  
3 qualms. And therefore he says that it is caused by Propulsid.

4 You have got evidence the other way. But it seems to  
5 me that the question is more of a factual question than a  
6 non-factual question. There was no EKG ever. If he had  
7 stopped taking Propulsid for a long period of time, all of  
8 these things would be then Daubert questions. There would be  
9 some preliminary questions. But the way that the fact unfold  
10 it seem to me that it is a fact question more than a legal one.

11 MR. MURPHY: Your Honor, if you will permit me, I have  
12 some strong differences with the court's summary and I will  
13 tell you what they are. In order for the plaintiff to prove  
14 their case, they have got to show first that the QTC interval  
15 at the time of Mr. Diez's death was prolonged and that that  
16 prolongation was caused by Propulsid, not by something else and  
17 that that prolongation caused torsades.

18 Because the only thing that causes torsades, both sides  
19 agree, is prolonged QT interval. It isn't caused by  
20 fibrillation. It is a fibrillation, and it is unique because  
21 it can only be diagnosed by the unique signature it give on the  
22 EKG. That's where it gets its name. That signature is an  
23 oscillation, and it has a, it appears to be a twisting of the  
24 point of the sign waves. And that's why they call it a  
25 torsade.

1 THE COURT: Let's hear it.

2 MR. MURPHY: Judge, I realize that I'm swimming  
3 upstream on things, and I intend to be a salmon today.

4 THE COURT: All right. Let me tell you just my view of  
5 it, and you can hit the highlights and see where I need  
6 education on. The individual had some EKGs done. The EKGs did  
7 not indicate an ischemia, didn't indicate any infarctions or  
8 anything of this sort. He was put on Propulsid. He as been  
9 into Propulsid for 10 days or so. He is doing a stress test.  
10 During the stress test he is being tested, and he has a  
11 prolonged acute interval. He goes on for a while with  
12 Propulsid, develops chest pain at night. Thereafter, he drops  
13 dead.

14 The expert testified that he had no cardiac accident  
15 before. He had no cardiac problems before. No cardiac  
16 complaints before. He had acute prolongation by getting a  
17 stress test, which some people will say that's what happens in  
18 a stress test. It is not unusual; he has it documented.

19 We know that Propulsid can through the channels or  
20 through the autonomic nervous system can cause, precipitate  
21 some prolongation, acute QT. He is on Propulsid. He has a  
22 demonstrated QT interval, prolongation.

23 We also know that Propulsid has been related for those  
24 who have taken Propulsid through instant death to some point  
25 which is precipitated by ventricular problems. This doctor

1 things are admissible because it shows what he has done to  
2 advocate certain things. It goes to his credibility and  
3 advocacy.

4 With regard to the Madigan Report, I am going to have  
5 to reserve ruling on that.

6 MR. IRWIN: Can I be heard on that? What the Madigan  
7 Report was was a report that was done by counsel for a company  
8 for which Dr. Shell was employed. And it was submitted to the  
9 FTC after finding that Shell was guilty of widespread research  
10 fraud. He faked data; he faked conclusions.

11 THE COURT: How do you get it in?

12 MR. MURPHY: Well, that depends on whether or not we  
13 can lay certain foundations during the trial. And assuming  
14 that we can, we believe we can get it in.

15 THE COURT: You are looking at it for cross-examination  
16 of a witness?

17 MR. MURPHY: Absolutely, under 608(B).

18 THE COURT: I'm going to reserve ruling on it and take  
19 it when it comes. The think that I don't think I will let in  
20 is the divorce and the taxes.

21 MR. MURPHY: I don't intend to offer the divorce. I do  
22 intend to offer the money. Thank you, Judge. And I am ready  
23 to be heard as to the other matter.

24 THE COURT: Any problem with his motion going on?

25 MR. WRIGHT: No, your Honor.

1           MR. MURPHY: The other thing is that the taxes, same  
2 thing, Judge. It tends to show that he is in great need of  
3 money. I can get through this smartly, because liens are not  
4 in controversy. See, when you cannibal the federal government,  
5 they are the first to come after you. It tends to show a  
6 financial desperation. And so I can just get right to that  
7 without -- we are not offering that to show lack of  
8 credibility, just a lack of money.

9           THE COURT: I don't know how you get into the owing the  
10 money through taxes. My feeling on taxes is that it is one  
11 thing if a person has that violation and is guilty of tax fraud  
12 in a sense that they didn't file income taxes. But when you go  
13 into taking the position that you made certain deductions or  
14 you did this or you did that, it gets into the tax law. And it  
15 is confusing to the parties and to the jury because you appear,  
16 tax lawyers will give four opinions on what to do and what  
17 could be done and what should be done.

18           The issue of whether he owes money is relevant  
19 obviously and that can be done without specific taxes. I would  
20 listen to that. My view is that accusations, suspensions of  
21 medical licenses are admissible. It is certainly 401, and I  
22 don't think that it is excludable under 403. The  
23 investigations by the FTC and the SEC are admissible. What the  
24 doctor received from various plaintiff litigation groups is  
25 admissible. Marketing effort of Fat Magnet and the other

1 certainly Dr. Shell. Dr. Shell has always objected to that  
2 being circulated to any third party. But, nevertheless,  
3 everybody, they are arguing that because it was sent that the  
4 privilege is waived. Dr. Shell at no time ever waived it, nor  
5 have I ever waived it. So we believe for the reasons of  
6 hearsay and the reason of attorney/client privilege that that  
7 should not be paraded in front of the jury.

8 By the way, that Madigan report was not connected to  
9 any science. It has no scientific value whatsoever. It was  
10 prepared by an attorney, not a doctor, not a scientist, and it  
11 has no substantive value. It should be excluded from the jury  
12 because it is critical of Dr. Shell and his work that was  
13 performed while at Nutra Corp. Science. That's all I have.

14 THE COURT: Okay. Mr. Murphy? Just talk to me about  
15 the fact issues and the --

16 MR. MURPHY: Divorce?

17 THE COURT: Divorce.

18 MR. MURPHY: I'm not interested in getting into why he  
19 owes \$4 million. And so we are not interested in bringing to  
20 the steps of the jury that he owes it to his wife. The fact is  
21 that he owes \$4 million. I can get that out of him on direct  
22 examination, and, of course, it goes to his bias as a witness  
23 because it tends to show that he is in great need of money and  
24 that he is --

25 THE COURT: I agree with that.

1 science that he is offering here in the Brock matter or the  
2 Diez matter and that that would be overly prejudicial for the  
3 jury to hear that as well.

4 THE COURT: What's the Madigan?

5 PLAINTIFF'S COUNSEL: The Madigan Report in a nutshell,  
6 Dr. Shell was an employee of Nutra Corp. That's important  
7 because he was an employee of Nutra Corp. Nutra Corp. asked  
8 for a study to be done regarding the, I guess, the efficacy of  
9 and correctness of reports by an attorney. And the attorney  
10 was hired by Nutra Corp., which was Dr. Shell's employer. Dr.  
11 Shell's employer at the time prepared a report. It was an  
12 attorney-client document. It was a document prepared by a  
13 client, by an attorney at the request of a client. And that's  
14 clearly attorney/client privileged communication. And that  
15 should be excluded from the jury for that reason.

16 Moreover, I don't know that there is any witness going  
17 to be called to testify regarding the contents of the Madigan  
18 Report. But the defendant simply wants to introduce the  
19 Madigan Report, and we believe it is hearsay. And for those  
20 reasons we ask that that be excluded.

21 Incidentally, the defendants attempted to get the  
22 Madigan Report by subpoena, and the attorney filed a motion to  
23 quash the Madigan Report, but it was released by a disgruntled  
24 employee. That's attached as an affidavit to one of our  
25 motions -- against the knowledge of the company and against

1 his license over a Friday. The check unfortunately did not  
2 reach, I suppose, the board of California until at a time when  
3 it is too late. So his license was in limbo as a result of  
4 that. He admitted a patient over the weekend at Cedars-Sinai;  
5 he was suspended by Cedars-Sinai. And Dr. Shell simply has not  
6 chosen to try to renew that license or his privileges at  
7 Cedars-Sinai. We believe that that also for substantive, for  
8 reason of why it was suspended should be excluded from the  
9 jury.

10 The next is community property and the divorce of Dr.  
11 Shell. We believe that those are totally irrelevant. That's  
12 his personal affairs, his own personal affairs. We believe the  
13 personal laundry should not be paraded in front of the jury.

14 Also, the prenuptial agreement that he has between  
15 himself and his current wife, that should not be placed before  
16 the jury.

17 And a couple of final things: The products that Dr.  
18 Shell has manufactured and/or marketed -- Fat Magnet and other  
19 things such as Arousal, we don't believe those things should be  
20 placed in front of the jury. We understand that here had been  
21 some FTC charges against Dr. Shell, none of which Dr. Shell has  
22 admitted any wrongdoing in. But simply for the sake of saving  
23 a large amount of attorneys' fees and a lengthy battle, he has  
24 agreed to consent to many of those things.

25 And we believe that that has nothing to do with the

1        liens, of tax liens with Dr. Shell.

2                We believe that that should be excluded from the jury.  
3        I appreciate the defense counsel's argument regarding the case  
4        that's cited. However, those cases deal with someone  
5        committing tax fraud, someone, for example, that did not file  
6        income tax reports or fraudulently filing income tax. In most  
7        cases it dealt with criminal matters. And we believe that and  
8        Dr. Shell has been up front with tax issues. He has never  
9        denied that he has had tax problems, simply outstanding liens  
10       and/or debts that he owes. We see no probative value for that  
11       to go in front of the jury, but prejudicial. We would ask the  
12       court to exclude those issues.

13               Secondly, is that of his probation on his medical  
14       license. It is true and Dr. Shell admits that he was on  
15       probation as a result and has said in the deposition that  
16       basically he was duped by a patient to prescribe Dilaudid. He  
17       was give a probation. He was never stopped or suspended from  
18       practicing medicine and plead as a result of that. But,  
19       nevertheless, he was put on probation for a very brief time for  
20       that. And we believe that that certainly would be more  
21       prejudicial in light of the license. Probation came as a  
22       result of it.

23               With regard to hospital privileges, at Cedars-Sinai, he  
24       was suspended from practicing at Cedars-Sinai, and the facts  
25       were again as stated in the deposition. He sent his check for

1 stand in recess.

2 MR. LEVIN: I will be leaving now. I have a partner  
3 whose son is being barmitzvahed, and I just want to let the  
4 court know. If the court has any questions?

5 THE COURT: No, I don't. I appreciate the comments  
6 that all of you made in treating stuff. I think that  
7 particularly the question of designs are a fascinating issue.

8 MR. LEVIN: We are glad it is your issue now.

9 THE COURT: Okay, thank you. I have a conference at  
10 1:30. It will take me 10 minutes, though. So be back here at  
11 1:45. Court will stand in recess until 1:45.

12 (COURT RECESSED AT 12:08 P.M.)

13  
14 P R O C E E D I N G S

15 (AFTERNOON SESSION)

16 (Friday, March 7, 2003)

17  
18 (COURT RECONVENED AT 1:45 P.M.)

19 THE COURT: Which motion are we taking first?

20 MR. WRIGHT: We would like to take the motion that I  
21 filed, the motion in limine regarding Dr. Shell's issues before  
22 the court. I know that your Honor has read the briefs, and  
23 your Honor has informed us before the recess regarding what he  
24 feels about the issues of relevancy and admissibility. So I  
25 will be very brief. I will go briefly through the issue of

1 percent of the information comes from American patients,  
2 focuses on issues that were talked about, thought about in 1999  
3 prior to the instance here. So there may well be some  
4 relevance under cross-examination or under even an expert  
5 taking that into consideration. But even if the expert does it  
6 under 703 basis of his opinion remember under the Knee  
7 Amendment that fact or data that are otherwise inadmissible  
8 shall not be exposed to the jury. Experts can take notice of  
9 them; experts can base his opinion on them but the fact of  
10 disclosing them to the jury may not be done under 703 unless,  
11 of course, the court determines that the probative value is  
12 greater than and can be of greater assistance to the jury than  
13 the other. That's the more recent amendment than when this  
14 case started. It has just come down, and it does do something  
15 to the 703 part. I'm going to take this issue under  
16 advisement.

17 I make these comments to the attorneys just so they  
18 know what my thinking is on those particular documents.

19 MR. AMEDEE: In that regard, your Honor, the court  
20 should be aware that plaintiffs in going through the initial  
21 exhibits that they are offering No. 267, which I think your  
22 Honor has Exhibit C, we have culled those documents to less  
23 than 100. So it might well make it a lot easier to address  
24 what they are.

25 THE COURT: Maybe more than I needed to do. We will

1 is at issue. And the person making that opinion and  
2 formulating that opinion is part of the case. Who is giving  
3 the opinion? What is their history for veracity, credibility,  
4 things of that sort all come into play more so than physical  
5 fact people who you can cross-examine on where they were and  
6 that kind of thing, physical facts. So most of the 401  
7 objections I don't think are applicable to experts. I think  
8 everything is pretty much relevant to experts.

9           However, I think there the issue really, the focus is  
10 on 403. Whether or not this is cumulative, whether it is  
11 prejudicial, whether or not it is too confusing to the jury,  
12 whether or not it has some problem that upsets the way that the  
13 jury process the information. So the 403 is the issue for the  
14 experts.

15           With regard to this particular matter, the first item  
16 that the plaintiffs seek to introduce them to me to be the  
17 grave men of that report, and I am not talking about a 901  
18 authentic type, I'm not talking about things like getting into  
19 evidence but just the substance of it. It seems to me to be  
20 dealing with children primarily. And we are dealing in your  
21 particular case with an adult. Most of the reports that I have  
22 read focuses on kids in the first issue.

23           The second document which you attach as B, I think  
24 Exhibit B, seems to me has some elements in it that focus on  
25 notice generically about the drug focus, on the fact that 60

1 the relevance standpoint. I can make some decisions on 901  
2 admissibility. I can make some decisions on questions of  
3 privilege and so forth. The relevancy is more difficult for me  
4 to deal with.

5 It is helpful, however, to have motions in limine on it  
6 because it gives me some opportunity to have thought it out a  
7 little bit more, to have thought it through and be able to  
8 circle it for my ruling and then have the ruling more  
9 meaningful and more consistent. So I don't have any problem  
10 with motions in limine. But my rulings on relevancy generally  
11 are withheld until the case proceeds so that I can put it in  
12 context, because it doesn't make any sense, relevancy, when you  
13 take it out of context.

14 With regard to this particular issue before me, also  
15 let me say that with question of 401 and 403 having said that,  
16 I look upon experts in a different way than I look upon regular  
17 witnesses. A witness who is an eyewitness, they can have a lot  
18 of baggage that they carry. And although to some extent their  
19 character is at issue, what they say and the physical facts of  
20 what, where they were and what they saw and what their eyesight  
21 is and things of that nature are more significant than their  
22 character or their past or their baggage or whatever it is.

23 Experts, on the other hand, haven't seen anything.  
24 They make an opinion from what's been told to them or what they  
25 have reviewed or what they studied. So their opinion is what

1 again there are probative issues in Louisiana of prior  
2 reliability and efficacy. Are we not to be allowed to be able  
3 to use evident that's reliable, trustworthy and evidence that  
4 these plaintiffs need in the presentation of the case? I have  
5 been sitting here and I want to go back, and I hate to do this  
6 but the last sentence I made when I made my argument was that  
7 if the court rules in the favor of the defendants, the only  
8 cause of action that the plaintiffs will have is their warnings  
9 case, and I just wanted to clarify that for the record, because  
10 if I didn't say that, that's what I meant to say.

11 THE COURT: I thought that's what you said.

12 MR. AMEDEE: Thank you, your Honor. And I just ask for  
13 54B because if that is the only cause of action, knowing fully  
14 there may be others that might exist, the item and expense  
15 associated with the trial would be, I don't think it would be  
16 advisable. And it is, in fact, a first instance case, case of  
17 first instance. I mean we, Mr. Irwin is right, there are no  
18 other cases out there especially in Louisiana that addresses  
19 it.

20 THE COURT: Okay. Let me make just a couple of general  
21 comments about evidence. First of all, the issue of relevance  
22 for the most part I look upon it as being contextual. And it  
23 is hard to exercise a relevance argument out of a proceeding.  
24 It is generally or has to be put in the proceeding at the time  
25 it is offered and so forth. To get some meaning out of it from

1 of the adjusted CPMP concluded regarding efficacy. It says  
2 (reading) Cisapride looks therapeutic in the indications of  
3 GERD. Regarding safety data from electro-physiological  
4 studies, clinical studies, spontaneous reporting and  
5 epidemiological studies show that Cisapride is associated with  
6 the risks of cardiac QTC and sudden cardiac death. That's what  
7 these cases are about.

8 The vast majority, if not virtually all of the  
9 materials relied upon by this agency in making their  
10 determinations were submitted to them by Janssen. They didn't  
11 just put them out in the air. So it represents the findings of  
12 a European publication agency. So subject to the exception,  
13 and it is admissible as a public record, relevant and reliable  
14 in establishing plaintiff's claims that he in carrying his  
15 burden, which we know now to be a strong one under the LPLA,  
16 the same can be said for the other document, the IKS, which is  
17 the counterpart of the FDA, and it also rendered an opinion  
18 that's relevant and reliable and probative of plaintiff's  
19 claim. You went into the document. I was going to read a  
20 quote from it, but I won't because there are findings in there  
21 that our experts relied upon that can be used in  
22 cross-examination of the defendant's experts and their  
23 witnesses that are probative in the case of the plaintiff's.

24 Now, there is one other item than foreign  
25 correspondence and this is Janssen's own competence. Once

1 this way. I mean it is a nice preview of what we are going to  
2 be faced with at trial, but I don't think it is the type of  
3 thing that you rule in or out at this point. Thank you, your  
4 Honor.

5 MR. AMEDEE: I will be brief, your Honor. You know,  
6 for two decades Janssen has, in fact, had and their  
7 counterparts total control of this drug, the information  
8 concerning this drug. Dealing with this foreign body, with  
9 that foreign body, with the FDA, we find out a few years ago  
10 that this drug had some serious side effects, might well be  
11 defective. Consequently we have to embark upon our task of  
12 finding experts. These experts have to rely upon certain  
13 documents. Dr. Stuppy did, in fact, rely upon the CPMP opinion  
14 in this evaluation of the efficacy and risks associated with  
15 the use of this drug. Whether or not Janssen was bound by it  
16 has no bearing on whether or not an expert for the plaintiffs  
17 can, in fact, rely upon it in the formulation of his opinion.  
18 Their opinion for Cisapride is relevant in that it is probative  
19 and reliable information that support plaintiffs' contentions  
20 and proving their case.

21 The LPLA, it addressed lack of efficacy, addressed  
22 risk/benefit analysis, and it also addresses alternatively  
23 designed probability, all of which the plaintiff has to prove  
24 in order for it to be successful in their cases.

25 I would like to quote from the document regarding all

1 they find out somebody slipped to know that they should put  
2 skid-proof material down on the floor or loading platform?

3 In the context of this trial, when the trial was taking  
4 place, your Honor, as a line officer rather than somebody  
5 that's scrambled eggs that ponders over decisions for weeks and  
6 months and does it just like this (snapping fingers), you can  
7 make a decision whether it is admissible or not admissible as  
8 the flow of the case goes on. I think these motions are make  
9 work. They are ill-advised as motions in limine. They are  
10 things that trial lawyers and trial judges deal with on a daily  
11 basis. To sit here and argue right now whether we weren't  
12 bound by the federal regulation our subsidiary company which is  
13 wholly owned by or parent company and that knowledge wasn't  
14 imparted to us and therefore that evidence should be excluded  
15 and we should have blinders on as to everybody that was going  
16 in front of us, all of these things, these warnings, these red  
17 flags coming up that they missed the target is going to occur  
18 during the flow of the testimony.

19 Your Honor can rule whether or not this is a notice  
20 issue or feasibility issue, whether it is remedial, whether it  
21 is a report from a foreign government, whether it is an adverse  
22 report, whether it is whatever it is. If it contributes to the  
23 knowledge that these defendants had or could have had, it would  
24 be relevant in the context of the trial. And it is I believe  
25 just ill-advised to deal with them on a motion in limine in

1 not regulatory documents. They don't make it either under  
2 44.1. These documents are going to be offered for one reason  
3 only: So that somebody can stand up and tell a jury that some  
4 European government after some presumable broad study has come  
5 up with something conclusive and isn't it terrible. In fact,  
6 the European agencies had no authority whatsoever over Janssen  
7 Pharmaceutica. We answer to the FDA and that's who we were  
8 supposed to. Thank you, Judge.

9 THE COURT: All right, thank you.

10 MR. LEVIN: What I have to say is generic applies  
11 probably to 90 percent of the motions, maybe all of them,  
12 except causation motion. So I will just address it once. I  
13 have been in your court now for two or three years. I haven't  
14 seen you try a case. Heard a lot about it. But I remember  
15 when your Honor was down here trying cases. These issues are  
16 the issues that lawyers in court deal with at trial. In the  
17 context of the delivery of the briefs, all of these issues go  
18 to feasibility and notice. We are very sophisticated. We are  
19 handling a MDL pharmaceutical case. But it really boils down  
20 to whether you could have put a rail on those steps that a  
21 person could have held on to so they wouldn't have slipped. Or  
22 maybe some skid-proof substance on a deck of a vessel. And  
23 they do it afterwards. And if they did it afterwards, was it  
24 feasible for them to have done it before? And did somebody  
25 else slip and did somebody else slip and how many times did

1 contribution to the evaluation of the safety of Cisapride.

2 Comments of that sort the plaintiffs argue are  
3 informational and that the worldwide distributor of the drug  
4 should have responded to this type of information. How do you  
5 deal with that?

6 MR. CAMPION: First, your Honor, in fairness to the  
7 defendants, the appeal that the defendant took which led to the  
8 issuance of that document turned on a request for approval for  
9 dyspepsia. And the matters that you just brought to my  
10 attention I don't believe really address the basis of the  
11 appeal taken back in the Swiss matter.

12 Second, matters with respect to notice in that should  
13 be the basis for it come down to this: The defendant sought  
14 and obtained from the FDA and presented materials to the FDA.  
15 The FDA drew its own conclusions about the efficacy again and  
16 again and again. I know there is another argument out there  
17 about which product is more efficacious, but we are bound by  
18 the FDA. Our obligation is to the FDA. It is the FDA who  
19 regulates us, not someone whose name I don't know.

20 The document has nothing to do with what the appeal was  
21 all about and there is something basically unfair about that.  
22 And obviously at the end one would argue the balancing point  
23 now and I will finish the argument in the brief, and we  
24 expected the various customary hearsay arguments under 803(5)  
25 and 803(6) and 807. These are not business records. These are

1           So we have the business then of two separate agencies  
2       which have no control whatsoever over Janssen. Judge, there is  
3       some language there which you will find one way or the other  
4       that if you put that before a jury they will have no  
5       understanding whatever as to what this is. Janssen was  
6       controlled by the FDA and answers to the FDA. It sought  
7       approval by the FDA. That was the ruling agency that matters.

8           Finally, your Honor --

9           THE COURT: Before you leave that document, help me out  
10      with this reference in it. The date you mentioned was prior to  
11      the, there is some comment in the document at page 11, and it  
12      says it is displeasing that a medicinal product for such wide  
13      use with which potential life-threatening cardiac side effects  
14      have occurred and for which finding exist have such sparse  
15      human data. And it says also in the same page a total of 348  
16      reports were analyzed. Of these 210 or 60 percent were serous  
17      QT, 40 of the matters for which -- then it says approximately  
18      60 percent of all 348 cases originating in the United States.

19           Another one they said something about on page 13 no  
20      validation studies have been carried out. There is another  
21      reference here on page 14, it says to summarize it must be said  
22      that no estimate of incidents can be derived from these  
23      studies, that the reliability in the informative power of  
24      Cisapride studies with regard to serious cardiac during the use  
25      of Cisapride are very weak. And those studies make no valuable

1 A. Correct.

2 Q. Do you agree you have no expertise on any of the  
3 European countries which have regulations about Cisapride?"  
4 And his answer was "yes."

5 Your Honor, for all of these reasons, the issuance of a  
6 document which bears a date two years after this product was  
7 taken off the market, three years after Mr. Diez death and the  
8 injuries to Ms. Brock were advanced, there is no basis on the  
9 grounds of relevance.

10 Now, the second document was the so-called IKS. It is  
11 a product of the Intercontinental Cantone drug-controlled  
12 office. It is an agency of the Swiss government. It is one of  
13 those agencies that may or may not simply want to play by  
14 whatever IMEA says. The only document they have before you is  
15 a document from July 1999, and I can concede that is prior to  
16 the date of defendant Diez' death.

17 But what does it hold? It holds simply that a  
18 particular indication for GERD, which was sought by a Johnson &  
19 Johnson affiliate, not the defendant in this case, not Janssen  
20 Pharmaceutica, for functional dyspepsia was not approved.  
21 That's what it says. That's its holding. There is a lot of  
22 talk about this they came to that conclusion. The fact remains  
23 that GERD still remained an indication in Switzerland a  
24 second-line treatment in 1999, and GERD was a second-line  
25 treatment in America in 1999.

1 Answer: "No."

2 "Q. Have you any information whatsoever in your career  
3 of the European regulatory agencies or pharmaceutical  
4 regulatory agencies?" Answer: "No."

5 "Q. Do you have any greater understanding of the  
6 European regulatory agencies than you have of the FDA?

7 A. No.

8 Q. Do you know who the person, who the persons were  
9 who participated in rendering the opinion that you saw on the  
10 screen?"

11 The doctor had said that the only thing he knew about  
12 this is that when he went to the computer, he went on the WEB  
13 and up popped this screen. And his answer to that was "no".

14 "Q. Do you know how much time finally they spent doing  
15 whatever it is that they do to come to the opinion that you saw  
16 on the computer screen?

17 A. No."

18 Page 101:

19 "Q. You have no expertise in pharmaceutical matter?

20 A. Correct.

21 Q. Doing your inquiring for your expertise, you  
22 don't know what the EMEA is?

23 A. Correct.

24 Q. Do you agree you have no expertise on how the  
25 EMEA came to their opinion?

1 in two words. I believe we have laid out in the brief. The  
2 first is before the year 2000 and before we took the product  
3 off the market, and every single foreign country that is  
4 Europe, had their own regulatory agency. In the year 2000 as  
5 part of the Europeanization they created this agency called a  
6 CPMP, which is different from the EMEA, and at the end of the  
7 day the European-wide organization does not have FDA authority.  
8 What every opinion comes down to when we study this is whatever  
9 you are going to study are not binding on a single country. So  
10 the existence of this opinion has no regulatory effect in  
11 Europe. Each European country chooses to accept it, it can.

12 Now, with respect to what the EMEA opinion is, there is  
13 no evidence whatsoever beyond this piece of paper that says  
14 yesterday I did get this from Stuppy about the EMEA to see if  
15 in some fashion he was going to bring evidence to the table  
16 that would make it relevant to this dispute. It is formally  
17 stated in the motion papers of the opposing motion supposedly  
18 prefiled by plaintiff that Dr. Stuppy is not a regulatory  
19 expert. So I asked him a few questions to see whether or not  
20 he can bring anything to the court which would bring life to  
21 that document for you. I will just read a couple of questions  
22 and answers.

23 On page 99: (READING) "Do you have any information  
24 whatsoever as to how EMEA, or whatever it is, studied the  
25 subject that was the basis of the opinion that it issued?"

1 FDA. And there is no dispute about the fact that during the  
2 time Janssen was selling Propulsid in the United States it had  
3 received FDA approval in 1993 from the FDA that the product was  
4 safe and efficacious when used in accordance with package  
5 inserts, and on six separate occasions from 1995 to the year  
6 2000, six additional approvals were received from the FDA for  
7 Janssen for various changes in the product insert, product  
8 warning, all of which concluded that the product as labeled  
9 remained safe and efficacious. In view of the FDA approvals,  
10 those are common to all of the foreign regulatory issues.

11 As to this CPMP document, I offer the following  
12 additional arguments, and by those arguments, I think by  
13 themselves should be sufficient to enable the court to deny use  
14 of the evidence of foreign regulatory matters simply on the  
15 ground that of their relevance. As to the CPMP, the document  
16 to which counsel wishes to present to the jury and have  
17 presented in some fashion through Dr. Stuppy, is a document  
18 that bears a date of 2002, more than two years after the drug  
19 was taken off the market in the United States. The conclusions  
20 reached in that document address matters which go beyond the  
21 scope of this case. And this, we turn our attention to the  
22 issue of what is the CPMP.

23 And while there is no federal foreign regulatory expert  
24 offered by the plaintiffs, what is the foreign regulatory  
25 scheme? The foreign regulatory scheme, your Honor, described

1 too much time for lunch because I'm boring enough.

2 THE COURT: All right. Anything we have to do before?  
3 If not, we will --

4 MR. IRWIN: Are we going to take up the forum  
5 regulatory matter? We can do that in five or six minutes,  
6 Judge.

7 MR. CAMPION: We have filed a preliminary motion to  
8 exclude all evidence respecting foreign regulatory matters.

9 THE COURT: Let's get that one for a moment.

10 MR. CAMPION: Judge, the foreign regulatory matters  
11 fall into three categories. Number one, documents which  
12 counsel have come to call the CPMP, okay, 2002 opinion. The  
13 second matter is called the IKS document, and the third is some  
14 internal memoranda from Janssen. This is addressed in this  
15 motion.

16 It is also addressed in a motion reading Dr. Dupuy, who  
17 I believe is the only plaintiffs' witness who is prepared to  
18 speak to the issue of the foreign regulatory matter common to  
19 all issues is the following: That the plaintiffs have not  
20 advanced a single foreign regulatory expert witness to address  
21 for the jury or for the court any of these matters.

22 Second, there is not dispute about the fact that these  
23 foreign regulatory agencies, of which I will speak, had no  
24 authority agency to which Janssen Pharmaceutica manufacturing  
25 and sale in the United States was obliged to answer was the

1 the law now and that's why we think this is a court question.

2 THE COURT: Okay, fine. Thank you very much. I'm  
3 going to take the under advisement. I'm not going to rule from  
4 the bench on it. Give me some logistical advice from the  
5 standpoint of the other motions that we have. Do you want to  
6 take a break for lunch and come back, or do you want to go with  
7 the motions?

8 MR. IRWIN: That's fine with us. We have a couple of  
9 motions that I think could be addressed in a little, matter of  
10 a couple of minutes. There are a few more that will take 10  
11 minutes or so perhaps on each side.

12 THE COURT: All right. Let's take those. We will go  
13 until 12 o'clock. We will take a break and see where we are.

14 MR. IRWIN: When we come back, we are going to go until  
15 12 now, and then I think what we would like to do, your Honor,  
16 is mindful of your Honor's comments this morning about the Diez  
17 causation motion for summary judgment, Mr. Murphy would like to  
18 address the court on that briefly and address some of our what  
19 we think are some issues involved in that.

20 THE COURT: All right.

21 MR. MURPHY: I'm not one of those two-minute guys and  
22 so I'm going to need more time than the 15 minutes, and I would  
23 appreciate going after lunch.

24 THE COURT: All right.

25 MR. MURPHY: But I would pray, your Honor, I don't need

1 factually supportable. That's number one.

2 Number two: I believe that much of the argument  
3 concerning the LPLA and the suggestion that the language is  
4 ambiguous, which I do not agree, would be an argument that is  
5 better made to the legislature without changing LPLA.

6 Next, I still heard and the court has still heard no  
7 cases cited to it from any jurisdiction in this country  
8 providing a precedent for drug-to-drug comparison as a  
9 reasonable alternative design. There are many states, most  
10 states, in fact, have a reasonable alternative design  
11 requirement as part of the equation of design liability. No  
12 other states have reported and cases where you can use another  
13 drug as another product for alternative design.

14 In 54B we would agree with the 54B ruling provided it  
15 comes after a verdict. We think that we ought to proceed with  
16 our trial on way or the other. And then after that we  
17 certainly agree that 54B would be appropriate.

18 And then finally in response to your Honor's question  
19 that it was suggest, yes, your view of liability is that this  
20 drug's risks outweigh its benefits. And that is the question  
21 to be presented to the jury. And then it should go off the  
22 market. And that is precisely what the law in Halphen was.  
23 That was the law in Halphen. Was asbestos unreasonably  
24 dangerous per se such that its risks outweighed its benefits  
25 and it should be off the market. That was the law. It is not

1 under the reading of the statute as Mr. Irwin would want the  
2 court to read the statute.

3 Now, while we are messing around in Louisiana with this  
4 issue, we have states that do not have these issues. And as  
5 much as I tried to have general verdicts, we have very few  
6 courts that allow general verdicts. So if we could remand  
7 cases to the various other jurisdictions and start seeing what  
8 other jurisdictions are doing with certain cases, some of those  
9 questions will be helpful in answering the specifics of the  
10 jurisprudence in Louisiana. And then maybe we could develop  
11 the end game or maybe that is developmental in the end game.  
12 Thank you, your Honor.

13 THE COURT: Thank you. Let me hear from defendants.

14 MR. IRWIN: Five comments or five points briefly, your  
15 Honor. Argument was made that if this aspect of the claim, the  
16 design aspect of the claim is dismissed, then they have no  
17 claim available to them. And I don't understand that, because  
18 they certainly have a warnings claim available to them. But in  
19 some respect it feels a little bit like to me that they are  
20 almost conceding the warning claim, that the warnings have gone  
21 to the doctor; the doctor is apprised of the risks. And when  
22 the suggestion is made that no claimants in Louisiana who use  
23 drugs have no claim available to him or her if this motion is  
24 granted, overlooks the existence of that warning claim and  
25 suggest to me in this case that that warning claim is not

1 would not have killed Mr. Reed. Mr. Diez if he did not die as  
2 a result of this injection and did not cause Ms. Brock  
3 prolonged sustained fatigue, that is the case.

4 So if the court decides in the defendant's favor after  
5 all the work we put in, I would ask that the court certify this  
6 as a 54(B) and give us the opportunity to file any state  
7 proceedings. The problem I have here is that this will take  
8 away half of Mr. Diez's cause of action and a substantial half.  
9 And it will also affect thousands of cases here in Louisiana.  
10 If this is accepted in the position it is accepted, the only  
11 causes of action that plaintiffs in Louisiana and quite  
12 possibly lots of states will have is a warnings case. And I  
13 just don't think that is the status of the litigation. The  
14 tort system is drug therapy; sale of drugs is void in that  
15 manner by our tort system.

16 THE COURT: Okay, fine. Do you have another comment?

17 MR. LEVIN: I know I am out of turn. A question that  
18 your Honor asked, and I will be very brief, is your Honor asked  
19 what are we to do if FDA says it could be on the market and  
20 Buckman says we can't question the FDA. Fortunately we have  
21 the lower verdict. The FDA does not preempt, never preempted  
22 drugs and really doesn't preempt medical devices. I mean,  
23 there are minimum standards. They do not do their own testing.  
24 They rely on the defendants for testing, and there is not  
25 federal preemption under the FDA. Where there is preemption is

1 be an easy task in this case. But our burden is one of those  
2 four. We know two of them don't apply.

3 And in a warnings case, especially in a case with a  
4 drug like this, that probably between letters to doctors, label  
5 changes, you have dozens of them over a seven-year period that  
6 we have heard the term label fatigue. The could very well be  
7 that this particular drug you couldn't give an adequate  
8 warning, and doctors just got tired of seeing them.

9 So what to do with this big conglomeration of  
10 confusion? You look at the product itself, and you do a  
11 risk/benefit analysis with the requirement that alternative  
12 design existed. The question if for the court and for all of  
13 these courts is whether or not that alternative design can be  
14 alternatively designed drug. We know there were plenty of  
15 those out there.

16 THE COURT: Another product?

17 MR. AMEDEE: Alternatively designed product.

18 THE COURT: Right.

19 MR. AMEDEE: That's what I like to call it but same  
20 product. So I have to join in with Mr. Levin. Counsel for  
21 defendants and I were wondering as to whether or not the court  
22 made a definitive statement, and I don't think that the Reed  
23 case required it. In this case and in the Brock case and Diez  
24 and Brock obviously there were alternatively designed drugs  
25 that could have been given to these two people that first off

1 THE COURT: But if we create in society a FDA, we tell  
2 the FDA it is your job to tell us what's proper to get on the  
3 market, and then we tell the tort system there is a requirement  
4 to warn, there are going to be several problems with drugs by  
5 their very nature of various drugs that the drug is a dangerous  
6 thing. But we are going to require them to make certain  
7 warnings on the label, and if they fail to make the warning,  
8 then people have a claim. But it is up to the FDA to tell  
9 whether or not something is appropriate for the market. That's  
10 their theory. What's wrong with that?

11 MR. AMEDEE: That bootstraps the defendant, I mean the  
12 plaintiffs' complaints because we can't, we don't have a cause  
13 of action as to that relationship with the FDA and the  
14 defendant. And we don't have a cause of action at least here  
15 in Louisiana and the vast majority of states for the promotion  
16 of the drug. You have to show it is defective. You have to  
17 show that --

18 Some states have the prudent manufacturer test, the  
19 consumer expectation test, which I think Louisiana does kind of  
20 lean toward, although it is not set for in the Act. And all of  
21 those establish the fact that you have to show a drug was or a  
22 product was defective when it left the manufacturer's control.

23 We did away with the negligent standard here. If we  
24 could have a negligence standard in this case, I wouldn't be  
25 standing here arguing about this right now because that would

1 business in the sense if they can't they can't change their  
2 pill because it is their pill and that's patented. It is with  
3 A, B, and C chemical and that's the chemical composition of  
4 their pill. They can't manufacture it with A and B because  
5 somebody else has a patent on that particular drug. So what do  
6 they do then?

7 MR. AMEDEE: They get in the market like Janssen did  
8 because that's when you get to the balancing. Once it becomes  
9 a fact, Judge, that this product is so unreasonably dangerous,  
10 then they have no alternative but to take it off the market,  
11 put it into some program or something of that nature.

12 You mentioned these drugs that are extremely dangerous:  
13 Chemotherapy, age drugs that borders on this concept of common  
14 K, the restatement. We don't have that. And it looks like  
15 these defendants are retreating to that position. With this  
16 drug when they have FDA statements that it could have a  
17 condition that could have been life threatening that could be  
18 treated with Tums, they are going to hide behind the fact that  
19 since you can't tell us how to redesign this drug, we are fr4ee  
20 to keep it on the market as long as we could, until the  
21 handwriting was on the wall, avoid advisory boards, committees,  
22 this, that and the other facts and say, okay. We better get  
23 out of this. I don't think that the Louisiana legislature  
24 intended that. I certainly don't think that society has made  
25 that judgment.

1           So along came the new product, the screw. The court  
2       said show us a better screw. I think in the amicus that was  
3       filed by the PSC they said you can make a screw longer, fatter  
4       and have different thread bars and most importantly even change  
5       to titanium.

6           It is not the case with drug therapy. Drug therapy is  
7       drug therapy. Whether a pill is round, whether it is square,  
8       oval, you take it the same. It goes through the same mechanism  
9       going into the body, and you don't redesign it by a method of  
10      injection. Some people can't swallow a pill so they have to  
11      take it intravenously, but it still has the same metabolic  
12      reaction when it enters the body.

13          THE COURT: What makes it defective in your view? Is  
14      it defective because the risks outweigh the advantages?

15          MR. AMEDEE: Your Honor, that's what our Act says we  
16      have to show, that a product is unreasonably dangerous in its  
17      alternative design requirements. Then we have to do a risk  
18      utility analysis, that its severity of risks are outweighed by  
19      its benefits and that an alternative design existed which was  
20      feasible, and the manufacturer could afford both economically  
21      feasible and could be manufactured feasibly.

22          THE COURT: How can they do that? They can't  
23      manufacture another drug because they have a patent on that  
24      particular drug just as there is a patent on Cisapride or  
25      Propulsid. So they can't manufacture it. So they are out of

1 the drug got into the doctor's possession. As to how the drug  
2 was promoted, all those honorariums and conventions. So we  
3 have to look at the drug. That's all we can do is look at  
4 whether or not the drug is so defective as the statute says  
5 when it left the manufacturer. That's what that cause of  
6 action says.

7 We also have to look as to whether or not when it left  
8 the manufacturer there was an alternative design. So what this  
9 argument is about: It is not about risk/benefit. It is not  
10 about unreasonably dangerous. It is really about whether the  
11 court will accept an alternative design drug to satisfy those  
12 requirements. Now, the defendants have tried to bootstrap, and  
13 rightfully so -- not rightfully so, but understandably so, the  
14 pedicle screw cases as being applicable and have cited Theriot  
15 and a number of other decisions and here in the Eastern  
16 District. The pedicle screw device utilizing a spinal device  
17 using pedicle screws is a multi-component device that has rods,  
18 it has a bar, it has fasteners and has screws. The alternative  
19 design that the plaintiff in that particular case set forth --  
20 I wasn't involved in that case, but I was involved in the  
21 pedicle screw cases, was a clamp. You got a clamp over here, a  
22 screw over here. These two things are machined differently.  
23 These clamps have been used for many, many, many years, back  
24 into the '30s, '40s, back in the Herrington rod that was hooked  
25 with clamps.

1 did they take the docs to nice places and entertain them for  
2 Cisapride? They do that. Did they take them to seminars and  
3 invite their wives and children to some nice places? They did  
4 that. Did they give them stock options? They do that. Did  
5 they give them honorariums? They did that. Did they ghost  
6 write articles for them and pay them to sign the articles?  
7 They do that. Others look at the articles that were signed by  
8 somebody that they thought was prominent not knowing that is  
9 ghost written and prescribe the drug.

10 Is there a learned intermediary defense there? Perhaps  
11 the jury would say no. All of these real concepts, the facts  
12 of the particular case would develop in a trial. And the fact  
13 finder, as the fact finder mostly does would make the right  
14 judgment. All that and we would be back to where the  
15 legislature said the law should be: Pre-Halphen, not the law  
16 that Mr. Irwin wants this court to adopt.

17 THE COURT: All right. Thank you. Any response?

18 MR. IRWIN: Should I wait until Mr. Amedee goes?

19 THE COURT: Yes.

20 MR. AMEDEE: I had an argument all planned, but the  
21 arguments really opened so many doors. The Buckman case does,  
22 in fact, prohibit a plaintiff in Louisiana from presenting  
23 evidence regarding how the drug got on the market. Louisiana's  
24 law limiting the causes of action to four as your Honor has  
25 stated limits the plaintiff from presenting evidence as to how

1 because my doctor told me to take this product. So isn't that,  
2 does it from the defendant's standpoint they say that if you  
3 include in the concept of alternative products a different  
4 product, then that in effect introduces into the area of design  
5 the intermediary defense, because the person who picked that  
6 product is a learned intermediary, and they did everything they  
7 could to inform this learned intermediary. The learned  
8 intermediary understood it and said notwithstanding those risks  
9 I believe this is the product. So they are off the hook. We  
10 have always had a learned intermediary.

11 MR. LEVIN: We have had this defense before.

12 THE COURT: In design or in warning?

13 MR. LEVIN: In warning.

14 THE COURT: Does this mean that it is part and parcel  
15 of design?

16 MR. LEVIN: As you play conceptually through with it,  
17 you just can't separate all these different concepts by  
18 themselves completely. At some point they all become a soup  
19 and they mesh together. As we lawyers know, and the  
20 plaintiffs' bar has dealt with the learned intermediary, I  
21 mean, perhaps your Honor might adopt the Perez case in New  
22 Jersey which says that if you have direct promotion on  
23 television, you don't have a learned intermediary perhaps.

24 Perhaps if the jury in looking at the learned  
25 intermediary defense would look at how they promoted the drug,

1 then it goes on to say that the person who alleges defective  
2 design has to prove that there is alternative design out there.  
3 So your burden is to show there is alternative design, you in  
4 effect are showing the existence of another design as opposed  
5 to alternative design, in a sense that it is a different  
6 design. So the question then is whether it is an alternative,  
7 whether the issue in the drug cases whether alternative design  
8 includes different design or different product.

9 MR. LEVIN: It has to, your Honor. Because it makes no  
10 sense if it doesn't. And that's why there has not, the Theriot  
11 decision did not really get involved in that, and it was a  
12 product, but it nevertheless touched consistently on what we  
13 are discussing here for a prescription drug.

14 But with a prescription drug, the alternative design it  
15 must be another product. My God, we played with the molecules  
16 and isomers. And I were to say that we have spent \$16 billion  
17 like they spent to develop Cisapride, and we now have an isomer  
18 that's better and the hydrogen rings in different positions, if  
19 that's what an isomer is, they would be arguing, well, I  
20 changed the product; it is no longer the molecule that is the  
21 product and is uniquely designed. It just can't be that way.

22 THE COURT: And then the question that you are  
23 confronted with and that's the Catch-22 in a situation is that  
24 when there is a different product then you ask the plaintiff,  
25 well, why didn't you take that product? And he or she says

1 different because in drug liability you are not only dealing  
2 with a regulated industry as you are with medical devices, but  
3 you are also dealing with chemistry, not mechanics, not the  
4 make of a steering wheel as to whether the steering wheel can  
5 collapse on impact or not collapse during impact. You are well  
6 beyond that. You are in a very, very sophisticated area. You  
7 can't have alternative designs. And if your are, if that's the  
8 law that you must have an alternative design in Louisiana, then  
9 you have given the pharmaceutical industry a free pass to do  
10 whatever they want to do. They can mislead the FDA, not report  
11 adverse reactions, not report deaths, not report injuries, not  
12 report what they see of a product in foreign countries, mislead  
13 the FDA plaintiffs. You can't go into the FDA. Buckman  
14 prevents you from doing that.

15 Plaintiffs, you can't show that you create this benefit  
16 with another product and alternative design when it comes to  
17 drugs. It would have to be another product, because the  
18 Louisiana legislature said you can't do that. I don't think  
19 that that's the case, your Honor. I don't think that's the  
20 result that's judicious. I don't think that's the result that  
21 any fair reading of the statute and the jurisprudence of  
22 Louisiana dictates. So that makes me --

23 THE COURT: Share with me your view on how you get  
24 there. You have got a statute that says there are only four  
25 areas of liability, and one of those is defective design. And

1 be the result of this particular statute.

2 So where do we go from here other than your Honor  
3 writing an opinion? I would suggest, your Honor, that is your  
4 have -- I think it is a monumental situation. I think this is  
5 a very, very important thing, and it certainly has an impact on  
6 the jurisprudence in Louisiana and probably elsewhere. Because  
7 other legislatures are looking to other statutes with regard to  
8 tort reform and want to know how they are being interpreted by  
9 the Couar courts. I have no crystal ball as to how your Honor  
10 will rule, but I suggest that there be appellate review,  
11 1292(B) or probably if you were to agree with Mr. Irwin a 54(B)  
12 dismissal, and we would get it up. I am not familiar with  
13 Louisiana practice to know whether your Honor has the ability  
14 to ask the Supreme Court of Louisiana to interpret the  
15 legislative system. I'm not sure that you do or you don't.  
16 But I know the Fifth Circuit does.

17 Perhaps with the suggestion to the Fifth Circuit to do  
18 this, because this is not the first. This is going to come up  
19 over and over again in all drug liability cases. And the  
20 courts have always handled drug liability differently than  
21 widget liability. 402 is a wonderful concept, but the  
22 restatement of torts is comment. It is there for drug  
23 liability. And the restatement of torts third doesn't even  
24 touch alternative design in drug liability. It has some other  
25 onerous provisions, but it recognizes that drug liability is

1 constitutional. And the Supreme Court of the United States  
2 said just that in Squid v. Kerr Magee when they tried to read  
3 out of the Price-Anderson Act the claim for punitive damages.  
4 And the Supreme Court said I can't believe the legislature  
5 intended to take a right away without giving something in  
6 return. And as such punitive damages remained under the  
7 Price-Anderson Act and under Soquid.

8 Now, when you take this statute coupled with the  
9 Buckman opinion in the Supreme Court, which says you cannot  
10 prove PLC, Plaintiffs Legal Committee v. Buckman, you cannot  
11 prove fraud on the FDA. You can't show that the defendants  
12 attempted to mislead the FDA. You are in the tort section.  
13 The FDA regulatory commission has nothing to do with it. It is  
14 up to them to enforce their own rules. It has nothing to do  
15 with tort liability. If you coupled Buckman along with the  
16 reading that Mr. Irwin wants you to make of this particular  
17 statute, the Louisiana claimants who took Cisapride, for that  
18 matter any other drug, would be out of court and are out of  
19 court, and I don't think that's what the governor intended.  
20 And it doesn't appear to be what Mr. Kennedy intended. It  
21 doesn't appear to be what Mr. Moore, who represented the  
22 Louisiana Trial Lawyers, intended. It only appears to be what  
23 the industry wanted that statute to accomplish. And I can't  
24 believe that we as a society as advocates on one side in court  
25 and the Fifth Circuit and the Supreme Court would allow that to

1 having this different product. And I don't think that issue  
2 was before the Louisiana State Legislature when they discussed  
3 several bills in one sitting and have a 20-something page record  
4 of the same. It just wasn't there.

5 As I read the legislative history and the comments that  
6 were made by Mr. Kennedy who was representing the governor and  
7 the governor was concerned about jobs in Louisiana and having  
8 some sort of tort reform, if that's a concept, and proposed  
9 that a terrible thing happened in Louisiana. There was the  
10 Halphen case. And suddenly we want to go back to traditional  
11 tor concepts with regard to 4002 A cases, and the way to go  
12 back is to adopt this statute with alternative design, and we  
13 can overcome the ramifications of the Halphen. Well, there was  
14 drug liability in Louisiana before the Halphen case. And there  
15 was the intent of the legislature was for there to be drug  
16 liability after the passage of that statute. And the reason you  
17 don't find any cases on defective design is narrowed to be  
18 argued the way we are doing here in other jurisdictions is they  
19 are not faced with that particular statute and trying to  
20 somehow fit in or fit out, fit without that statute. But  
21 that's what we have in Louisiana.

22 And I do believe that when statutes are ambiguous and  
23 when statutes are applied the way a party wants them to apply  
24 would take a right away without a quid pro quo, that the  
25 statute has to be read in such a way that the statute becomes

1 record. The plaintiff's attorney failed to show for the  
2 argument, was called to court and God Bless the Fifth Circuit.  
3 They waited for him to get in his vehicle and get to the court  
4 and argue before them. That would not have happened in my  
5 jurisdiction in the Third Circuit.

6 And in Reed I do not believe you had a proper record  
7 before you, and the PFC did not address it because in the  
8 February 3, 2003 transcript, a fair reading of that transcript  
9 at least the way we read it is that your Honor was looking at  
10 something that was very, very case specific with regard to the  
11 symptoms and the treatment of the Reed plaintiff. And the  
12 products liability statute in Louisiana was not up front in your  
13 Honor's reading at that time. I believe that's the way I read  
14 your Honor. Your Honor knows better than I do because you  
15 wrote the opinion.

16 But if Mr. Irwin is correct, then there can be no drug  
17 liability in Louisiana. None whatsoever. We re not -- I  
18 believe that hooks and other types of screws, rods, are  
19 alternative products. And Theriot was wrongly decided, because  
20 the record hadn't been made properly by expert testimony in  
21 Theriot. But even that is a far cry from Cisapride, a chemical  
22 that has a molecular composition, has hydrogenics that are  
23 unique, patented and only as to itself. And I don't know how  
24 you can tamper with that particular molecule to make an  
25 alternative design without changing the molecular molecule and

1 certain products, especially those that are heavily regulated  
2 will be available to the public through certain, in certain  
3 limited ways. And this would include prescription drugs, and  
4 that those drugs so long as they are permitted to be available  
5 and are accompanied by proper warnings, while they may be very  
6 dangerous to many people and many circumstances, does not make  
7 them defectively designed. They are what they are. They are  
8 designed to embody those risks. Those risks are a direct  
9 result of those designs, that design which cannot be changed  
10 without changing the product.

11 THE COURT: Okay, thank you. I understand your  
12 argument. Let me hear from the other side.

13 MR. LEVIN: Good morning, your Honor. Mr. Amedee has  
14 allowed me as amicus to go first. I'm not going to be as case  
15 specific as he is. I do not share Jim Irwin's views especially  
16 when they come to drugs. I can't believe society or the  
17 legislature in Louisiana made the judgment that has the  
18 ramifications that Mr. Irwin attributes to them.

19 Your Honor is faced, despite the Theriot case -- am I  
20 pronouncing it correctly? Because I say Dalbert for Daubert --  
21 it was the three pages. Your Honor's Reed case I believe came  
22 up as an aside and wasn't as fully developed. As your Honor in  
23 begriming to think about this, and counsel are going to aid you  
24 in the thought process, in Theriot it is no excuse for the  
25 opinion, but that court, the Fifth Circuit, did not have a

1 regulatory authority authorities are going to permit it to  
2 remain the market, that that risk/benefit equation and that if  
3 doctors are going to elect to use it, presumably they have been  
4 fully informed of the risks and benefits in the product  
5 labeling, that the responsibility would then not be with the  
6 manufacturer of that drug. I don't know that there is any  
7 case, there is not case anywhere that suggests that there is  
8 negligence against that manufacturer merely because that drug  
9 happens to be "more dangerous" than other drugs that might  
10 treat HIV, treat cancer.

11 THE COURT: Your position is that as long as, you  
12 meaning the manufacturer, advise of the risks you can  
13 manufacturer any drug with any risks as long as there is some  
14 benefit, even if it is overwhelmed by the risks if you advise  
15 the physician, and he is fully or she is fully informed of that  
16 risk and you require that it be a prescription drug?

17 MR. IRWIN: Yes. And that presumes that the drug is  
18 properly on the market and permitted to be labeled in that way  
19 by the FDA.

20 THE COURT: You would shift the responsibility then to  
21 the FDA rather than the tort system, is that what you are  
22 saying?

23 MR. IRWIN: No, no, your Honor. I don't mean to be, I  
24 don't think it is a shifting of responsibility. I think it is  
25 a, I think it is a judgment that we have made as a society that

1 appropriately.

2 And every drug in one respect or another could be  
3 called a dangerous product, every single one of them all the  
4 way from aspirin on up. And in our society and our laws  
5 recognize that certainly with respect to prescription drugs  
6 that we want those judgments made by professionals. And they  
7 will make those judgments about risk and benefits. So, yes,  
8 there are dangerous drugs and there are dangerous products on  
9 the market. And alternative designs to those products to not  
10 result -- I should say -- let me rephrase that. We don't judge  
11 the dangerousness of those products based on the availability  
12 of other products that may be less dangerous. What we require  
13 is that those products be appropriately labeled.

14 THE COURT: I can see, for example, a manufacturer  
15 manufacturing, say, a drug with 99 percent of risk and one  
16 percent advantage. But if it cures AIDS and there is no other  
17 drug on the market and those risks are described, maybe that's  
18 okay. Twenty, 30 years hence when there is four or five or six  
19 other drugs on the market that equally cure AIDS but don't have  
20 that 99 percent risk, does that drug then become defective or  
21 does it simply mean that the prescriber may be negligent for  
22 prescribing a drug with that many risks when there are other  
23 drugs out there that don't have the risks?

24 MR. IRWIN: Maybe. I don't think that drug becomes  
25 "defective". I think we made a societal decision that if the

1 determining its efficacy, and if you conclude that its risks  
2 outweigh its benefits and it should be "off the market" and you  
3 can do that by looking at the risks and benefits of other drugs  
4 by comparison, then you can find that this product is  
5 unreasonably dangerous.

6 That is the exact point that was being made by Chuck  
7 Moore in the transcript that we present to your Honor last time  
8 where Chuck Moore made the observation that the LPLA could  
9 change the law under Halphen as it relates to products that  
10 cannot be redesigned. That's what he was saying. You cannot  
11 redesign a product; then the LPLA may not have a cause of  
12 action, effectively have a cause of action for that product.

13 And that's a fact, Judge. If you can't redesign it, if  
14 it is incapable of redesign, then there is no alternative  
15 design. And I think that's what we have got here. I cannot  
16 redesign Cisapride without making something other than  
17 Cisapride.

18 THE COURT: Can you manufacture a defective, a  
19 dangerous product and then everybody recognizes that it is a  
20 dangerous product, and nobody has a claim because there is only  
21 one product?

22 MR. IRWIN: I think you can, and I think you do. I  
23 think the manufacturers of a dangerous product label them,  
24 because sometimes the dangers are apparent and sometimes they  
25 are not apparent. And they are supposed to be labeled

1 of a pedicle screw from stainless steel to titanium and not  
2 change the product, it is still a screw, still does exactly the  
3 same thing, if you change the Cisapride and it is no longer  
4 Cisapride, it is no longer a screw. That is why Dr. Eckberg  
5 doesn't get on the witness stand in any state in this country  
6 and suggest to the jury that they can consider Metoclopramide  
7 as a design for Cisapride, not anywhere. And that is why the  
8 pedicle screw cases went the direction that they did.

9 Initially they felt like alternative treatment cases,  
10 but they were also advancing different design theories as well.  
11 So, your Honor, we believe that the analysis that Theriot has  
12 is correct. If you use that same analysis and apply it to a  
13 witness like Dr. "X", who proposed to use a different product,  
14 then it applies.

15 And finally, with respect to the LPLA, it gets us back  
16 to the other issue. Although I do believe this firmly, it is a  
17 balance question. It involves drug regulation, the FDA and  
18 decision by surgeons. But if you focus and narrow this down  
19 with LPLA, which we do eventually, if you go back and look at  
20 this issue, the way they present their case and the way they  
21 want to present this case and the way Your Honor analyzed the  
22 issue in footnote three in Reed, basically what they want to do  
23 is to take us back to Halphen.

24 And they want to say to the jury you can determine  
25 whether this produce is unreasonably dangerous just by

1 arguments drifted into the ideas of design. And so then the  
2 plaintiffs would advance that the design argument, the  
3 "designing argument" that, look, those pedicle screws are  
4 unsafe when you put them in the lumbar pedicle. And a safer  
5 design -- and this is where it became determinative -- they  
6 said a safer design would be hooks or a safer design might be a  
7 rod that wouldn't expose the patient to these risks of nerve  
8 root irritation. Or they even said a safer design might be for  
9 the surgeon to use a bone graft and use the person naturally  
10 rather than using hardware at all. And the courts saw through  
11 that particular line, and they say those are alternative  
12 treatments, or they are different designs, they are not a  
13 pedicle screw -- they are not a screw.

14 Now, some of the plaintiffs did advance or at least  
15 tried to advance the traditional same theories involving the  
16 pedicle screw, and they said, well, this pedicle screw was  
17 defectively designed because it is made out of stainless steel.  
18 This screw would be of better design and it would not corrode  
19 as much if you made it out of titanium. Bingo. There is  
20 alternative design. Exact same screw to be used by the  
21 surgeon, the exact same way, no more. How the surgeon chooses  
22 to use it, but they change the composition of it, but they  
23 hadn't changed the product.

24 Now, that is very relevant to what we are dealing with  
25 here. Because if you change, if you can change the composition

1 particular case --

2 MR. LEVIN: Not that case.

3 MR. IRWIN: Not that case. He and I were in for a long  
4 time up in Philadelphia, but what all of those cases involved  
5 was the decision by doctors to take an orthopedic bone screw  
6 and implant that orthopedic bone screw in a lumbar pedicle in a  
7 location from which it was not labeled for use for an implant  
8 by the FDA for an indication. And the argument went, of  
9 course, that there was grounds of maybe promotion for use.  
10 That was the thrust of those cases.

11 There were also arguments made that the pedicle screw  
12 system was unsafe and that lost of extra risk, because if you  
13 screw the pedicle screw into the lumbar pedicle, you invited  
14 risk of another root damage; whereas, if you took that exact  
15 same screw and if you screwed it into the sacrum, into the  
16 sacral path where there was not these nerve roots, you would  
17 not expose the patient to the same damage. In those cases the  
18 court said, well, that was a choice of "treatment" by the  
19 doctor as to where he or she chose to put that pedicle screw.  
20 Whether the pedicle screw was chosen by the doctor to be put  
21 into the sacrum or whether it was chosen by the doctor to be  
22 put into the lumbar pedicle, it was a choice of treatment.

23 But other arguments were advanced by the plaintiffs to  
24 try to salvage those cases and to keep them from being  
25 dismissed on summary judgment. And that is where those

1 that these pharmaceutical cases around the country were  
2 determined on that basis, we would see it reported. We would  
3 see it in the Fifth Circuit. We would see it in Novartis, in  
4 the Stone v. Novartis case. We would see it everywhere where  
5 the parties have litigated and presented theories of liability  
6 about, well, was the Lamasil, which was the drug used in the  
7 Stall case, was the Lamasil safe enough in comparison to  
8 another fungus drug? We have heard that that would have been  
9 litigated forever in the Stall case. We would hear it in all  
10 of our cases. We would have courts of appeal addressing it,  
11 the risks of the design of all sorts of drugs and comparing  
12 them to what was the safety profile of a different drug. And  
13 we don't do that because it is not an alternative design. That  
14 is the reason, your Honor.

15 THE COURT: Okay. In the Theriot case the court, the  
16 Fifth Circuit said that when the argument is that you should be  
17 or use another medicine or place another device, in that  
18 particular case that that would be the call of the doctor as  
19 opposed to the patient. But does that case say that it's not  
20 alternative design, or does that case say that it is the  
21 learned intermediary's decision and that is the proximate  
22 cause?

23 MR. IRWIN: I think that case says it is not  
24 alternative design. What we were dealing with in that case,  
25 and Mr. Levin and I have handled them to the bottom of that

1 So it is not threat the LPLA does not apply conceptually drugs,  
2 it just says that if you are going to say alternative design,  
3 you are going to have to do it in certain ways. And it can't  
4 be by using a different product. You can't change the  
5 molecules. That is no longer an alternative design.

6 Our classic alternative designs are the kind that you  
7 described this morning in chambers when we had the other  
8 discussion. It is the kind that I described. I think we have  
9 our Reed argument when we talked about the Brown v. Ferral Gas,  
10 which was a case that the plaintiffs cited, where that case  
11 involved a custom smoker. It was a propane-fired smoker. And  
12 the question was whether it could be redesigned or apply a hot  
13 valve that could shut it off. Those are all classic design  
14 cases.

15 And what we are dealing with here is a question about  
16 whether Rezulin is an alternative design for Cisapride. That's  
17 the bottom issue. Are we going to allow it in this case?  
18 That's the issue. And as a practical matter, are we going to  
19 allow in this case Dr. Eckberg to get up on the witness stand  
20 and tell the jury that it is feasible alternative design to  
21 Cisapride to Rezulin? And I don't propose to go into the  
22 qualifications of him because he is not a drug designer. I  
23 only make that point to show just how off in left field that  
24 really is.

25 Because if that were the case, if that were the case

1 THE COURT: Treatment?

2 MR. IRWIN: -- different product, you can call it a  
3 different treatment, you can call it a different product. It  
4 is not a new design. A new design as the commentators have  
5 analyzed, whether it is the third commentary to you, two  
6 commentary or one law review article, they fall into three or  
7 only three categories of the drug. If you want to suggest that  
8 Volmax or Cisapride or Metoclopramide can be delivered a  
9 different way, either in time release or injection or might  
10 make it --

11 THE COURT: Syringe as opposed to pill?

12 MR. IRWIN: Yes, sir. That is one of the three. The  
13 other is dose. If you can suggest that a safer dose would be a  
14 different design, that would be another. And the third is if  
15 it is like a good example is a vaccine or an influenza virus.

16 Apparently an unknown vaccine which is mentioned  
17 earlier by the World Health Organization, it is a recipe that's  
18 used of three viruses that they select, those are the only tree  
19 ways that you can present an alternative design. If you go to  
20 a different drug, Rezulin is not Cisapride.

21 And that is exactly what the court said. It said the  
22 only active compound is a chemical compound known as Triazolan.  
23 As a scientific constant Halcion is incapable of being revised,  
24 modified or re-defined or alter the chemistry of Riazolan  
25 molecule would be to create a new compound and a new product.

1 drug? I mean, how does the plaintiff go about proving it?

2 Let's assume as the Product Liability Act in Louisiana  
3 says that defective design is one of the four theories, and  
4 then 2800.56 says a product is reasonably dangerous in design  
5 if at the time the product left its manufacturer's control 1)  
6 there existed an alternative design for the product that was  
7 capable of preventing plaintiff's damage. So that's one of the  
8 elements that the plaintiff has to prove in a defective design  
9 case.

10 There is no provision in the law of Louisiana that says  
11 drugs are excluded from product liability. So I assume that  
12 drugs are covered by products liability. And if they are  
13 covered by products liability, it seems like unless there is a  
14 specific exclusion for drugs under the defective design, then  
15 they are covered by the defective design theory. And if part  
16 of the defective design theory burden on the plaintiff is to  
17 prove an alternative to that particular drug, now do they do it  
18 other than by showing that there is another drug capable of  
19 treating the condition that is available? How do they do it  
20 otherwise? Aren't you in effect saying that sub se lento there  
21 is no defective design case for drugs in Louisiana?

22 MR. IRWIN: There is, and in three categories those are  
23 ones we described in our brief. It would be, the difference is  
24 I think, forgive me for being over simplistic, but what they  
25 are suggesting is not a different design but --

1 we look to find cases, but it is not a surprise that the  
2 plaintiffs have not directed us to one case in America where  
3 there has been a design claim for drugs where you compare drug  
4 to drug -- you made drug comparisons -- there isn't a single  
5 case. They cited six cases which we clearly distinguished the  
6 last time, and I won't go through those again.

7 They didn't purport to try to respond to those  
8 distinctions that we made in our reply brief. None of those  
9 cases involved drug-to drug comparison, not a one. One state  
10 did involve a comparison of adermidicid or herbicide to another  
11 chemical, but none of them involved drug-to-drug comparisons.  
12 And that is at the very heart of this question. And that is  
13 why I suggest to your Honor the drugs are different because of  
14 the role of the FDA and because of the role of doctors. That  
15 is the overriding fundamental really conceptual issue here.

16 Then we can talk to LPLA, and it doesn't make any  
17 difference whether we are talking about Mrs. Brock or Ms. Reed  
18 or Mr. Diez, they are all going to have different side effects.  
19 They are all going to have different benefits, and they are all  
20 going to experience different risks with whatever medicine that  
21 they use.

22 THE COURT: But is your argument focused on the fact  
23 that the learned intermediary defense is not only available in  
24 warning, it is available in defective design as opposed to the  
25 argument that an alternative is not or may not be a different

1 should not have such dire side effect as sudden death,  
2 arrhythmia or prolonged QT interval, and if it does as is the  
3 case with Propulsid, the drug is defectively designed. And I  
4 do think that that is their argument, but it is not the law.

5 That is not the law in this state. It is not the law  
6 under the LPLA. And for that matter, Judge, and I think this  
7 is the most important thing, it is not the law in any state in  
8 this country. And the reason it is not is simply because we  
9 are dealing with drugs. And we can talk about the law, and I  
10 am really more skilled to talk about them today, but  
11 fundamentally what they have said is we made societal and  
12 regulatory decisions and opinions about the handling of drugs  
13 in other societies; therefore, the FDA make regulatory  
14 decisions about what drugs are going to come onto the market,  
15 it makes regulatory decisions about what drugs will go off the  
16 market.

17 The analysis the FDA applies is not at all the same as  
18 what a jury might apply. And drugs are used by individual  
19 based on prescribing decisions by doctors who make risk/benefit  
20 determinations about whether patient A would be better on  
21 Rezulin or might be better on Asofax or patient B might be  
22 better on Propulsid or might do better with Xantac.

23 For these reasons that is why drugs are different.  
24 And, therefore, it is no surprise, and I guess maybe a little  
25 troubling and why we lawyers like to go to the library because

1 left with the suggestion that we could start with the design  
2 motion.

3 THE COURT: That's fine.

4 MR. IRWIN: Is that acceptable?

5 THE COURT: Yes.

6 MR. IRWIN: Your Honor, I will avoid repeating as much  
7 as I can the discussion and comments I made at the rehearing.  
8 Some of them I think necessarily need to be recited to some  
9 extent here. We would suggest that although I guess in some  
10 respects that is an unusual question and certainly and  
11 interesting question, we think it is a question that has a  
12 clear answer. The issue or rather the argument that the  
13 plaintiffs make is that Propulsid is unsafe and should not be  
14 on the market and that there are other, more effective drugs to  
15 treat GERD, and they would suggest that these other, more  
16 effective drugs are alternative designs for Cisapride, IAH  
17 blockers and Anaside and Rezulin. They say they have less  
18 dangerous side effects, and they would suggest that that  
19 balancing test would permit a presentation of a liability  
20 question to the jury, that the jury would be able to make a  
21 judgment about the design to other drugs.

22 Your Honor sort of capsulized the issue in a footnote  
23 in your Reed opinion where you said, and this is footnote  
24 three, the thrust of plaintiffs' complaint seems to be that a  
25 drug design for the treatment of a gastrointestinal problem

1 to amend the order to make it clear that my ruling applies to  
2 only those three cases, reserving everybody's right to urge or  
3 to defend on the other areas. Okay, anything more on the MDL?

4 MR. IRWIN: Next month, your Honor?

5 THE COURT: Yes, let's get a date then. The 25th,  
6 April 25th is convenient. I'm going to be trying some cases in  
7 Laredo, Texas the following week, so I will be out of town.

8 MR. IRWIN: Okay with defendants, your Honor.

9 MR. WRIGHT: That's fine.

10 THE COURT: Before we leave, is there anything further  
11 from the state liaison, anything further from the states?

12 MR. ARSENAULT: No, your Honor.

13 THE COURT: Okay. We will take a break at this point  
14 and come back for motions in limine. Court will stand in  
15 recess.

16 (COURT RECESSED AT 10:32 A.M.)

17  
18 P R O C E E D I N G S

19 (Court reconvened at 10:42 a.m.)

20  
21 THE COURT: Okay, we have some motions before the  
22 court. I understand that the parties would like to decide the  
23 order or have some ideas on the order of the motion. I will  
24 take them up in whatever way you want to take them up.

25 MR. IRWIN: I believe our discussions this morning we

1 three of that minute entry was that the paragraph should not  
2 apply to any matter other than the three cases cited. And I  
3 believe there is not disagreement as to that either. However,  
4 the PFC is very concerned about the scope of that motion, and  
5 it should be limited. We have filed with the court two  
6 declarations. I have the original declaration here to present  
7 to the court of Mr. Buchanan to substitute into the record  
8 should the court want that or need that. But the PFC prefers  
9 that no findings as to what was contemplated, negotiated or  
10 should be produced in connection with PFC discovery should have  
11 been ruled upon by the court. And it is specifically  
12 electronic calendars and information was contemplated, and we  
13 did not want that record to hang out there to the prejudice of  
14 others who may, in fact, desire to get some electronic  
15 discovery. I believe that's the only issue that's really in  
16 dispute.

17 MR. IRWIN: We concede that the resolution of the  
18 hearing that you held on December 23rd applied to Brock, Zeno  
19 and Diez. If the MDL ever wants to bring the issue before you  
20 for resolution, we will then re-address the same matters and  
21 also address the question of cost. And with respect to that  
22 argument, on the day before Christmas Eve, Judge, I know it was  
23 as to those three cases.

24 THE COURT: I understand the issue, and I will deny the  
25 motion for reconsideration with the exception that I am going

1           THE COURT: Motion to reconsider the January 2nd minute  
2 entry.

3           MR. DAVIS: Your Honor, that matter is set for hearing  
4 today. We have had a number of discussions over that. The PFC  
5 filed a motion for reconsideration in addition to the one that  
6 was filed specifically in the Diez case. The Diez case also  
7 has a motion for reconsideration. If your Honor would like the  
8 PFC to give its comments on that, I can be brief.

9           THE COURT: All right.

10          MR. DAVIS: The memo that we filed on behalf of the PFC  
11 spells it out. There are two matter that were exchanged  
12 between counsel, and I think you will -- I say counsel, I mean  
13 defendants' liaison counsel and plaintiffs' liaison counsel,  
14 and you will find that there is not disagreement as to the fact  
15 that the minute entry that was entered by this court on January  
16 2nd relating to a motion to compel is limited in application  
17 solely to the three cases, Diez, Brock and Zeno.

18          We also agree that the findings of the court were based  
19 upon matter submitted in connection with the motion and in oral  
20 argument of counsel. And the findings are without prejudice to  
21 the plaintiffs' steering committee. That's based upon the fact  
22 that that motion was filed solely in connection with those  
23 three cases, and the replies were solely in connection with  
24 those three cases. And the PFC was not a party to that motion.

25          The court's intention specifically as to paragraph

1 informed in about or within one month, by the time the next  
2 conference comes. We have the results of two trials. We are  
3 going to see the issue starting to play out. The end game  
4 committee is not dead, it just isn't too active because people  
5 are involved in other things. Mr. Zimmerman and Mr. Levin are  
6 not the only participants. Mr. Preuss and I once again are  
7 going to sit down with the -- I guess it is going to be  
8 desirable to look forward to a conference in chambers with you  
9 and members of the plaintiffs' side of the end game planning  
10 committee to see if there is something that can be done with  
11 that.

12 Your Honor, I have nothing else to say.

13 THE COURT: Okay. Well, I have said enough. I think  
14 that my feeling about the MDL is that it is a good concept, but  
15 it has a timeline to it. And once the timeline is past from  
16 the standpoint of discovery, then it ceases to be a help to the  
17 litigants. And we just have to then focus on what to do with  
18 the cases thereafter. One way is to send them all back; the  
19 other way is to send them back to states in some kind of  
20 sequence. Another way is to try some of the cases here. There  
21 are various way of doing it. But you all need to focus on  
22 that. And by next month we will set up some kind of end game  
23 committee meetings with the court, and we will see if we flesh  
24 it out.

25 MR. ZIMMERMAN: Thank you.

1 solution, they should not have the benefit of the MDL holding  
2 onto the cases so that they can deal with them one at a time  
3 for the next 22 years. They ought to just go back and let's  
4 see what happens. Otherwise, they ought to come to the table  
5 with your good offices and try to resolve this globally. But  
6 so far they have shown to indication whatsoever of doing that.

7 THE COURT: Does the defendant want to speak on that?  
8 I don't want to have you just one side be heard.

9 MR. CAMPION: Well, your Honor, we have made clear to  
10 the plaintiffs with respect to their proposal that there be  
11 some global resolution of 40,000 plus or minus cases, we are  
12 not going to do it. We have told them in the clearest possible  
13 terms that we will not enter into some program in return for  
14 something in an affidavit that this plaintiff will receive "X"  
15 dollars, "Y" dollars or "Z" dollars. It is pretty obvious that  
16 we are going to move toward a couple of QT trials. There is  
17 not doubt about that. Whether it is here, there or someplace  
18 else I don't know. Probably it is best for all if it is here,  
19 because something may come of that. I doubt very much whether  
20 my colleagues on the plaintiffs' bar will ever agree about the  
21 fact issues in the QT cases, especially other cases will never  
22 be put in the litigation and all cases they control will  
23 disappear. It is not going to happen in the real world, may  
24 not happen because of any number of reason.

25 Nonetheless, I guess we are all going to be pretty well

1 Then I can meet with the end game committee and talk about  
2 these matters. You have got to focus, the end game committee  
3 has got to focus on how to resolve the cases that are not  
4 resolvable by mediation. And through some creative ways it can  
5 be done. But you have to get together and talk about them and  
6 make sure that your clients are protected by them. But we have  
7 got to have some finality on these cases soon.

8 MR. ZIMMERMAN: We can create things by ourselves, your  
9 Honor. We can't even make things with our good offices unless  
10 there is some degree of creativity on the defense side. And we  
11 can't force them to do what they don't want to do. So just  
12 sending a case back here and a case back there is playing by  
13 their binary rules. They don't want to deal with it globally,  
14 and they have a right not to want to deal with it globally.

15 So that all I can say is if they want to try cases,  
16 they want to handle them individually, God bless them. The  
17 more that go back and the more cases that they have to deal  
18 with at the same time, the better off all of us will be.  
19 Because to send them back one or two, three times is the best  
20 thing in the world for the defendant. It goes on forever. And  
21 they get a verdict here so they blame it on Mississippi.  
22 Another verdict comes in in Michigan. They have lousy laws.  
23 So the plaintiff blames it on Michigan.

24 It isn't going to work out unless the defendant wants  
25 to find a global solution. If they don't want to find a global

1 there is resolved. Taking your 1404 example, let's assume we  
2 try a case back here in your forum. Under that scenario of the  
3 case where it is not a death case and it is not a case that's  
4 "in the mediation program" but it is a case we argue about  
5 every day as to whether or not defendants want to settle it, we  
6 say, well, let's try it, let's try it. We get a verdict.  
7 What's the effect of that verdict? If we could have some  
8 understanding if it goes "A" or if it goes "B", something will  
9 happen. That will advance the process. But absent that, all  
10 we have done is try that case.

11 THE COURT: Yes.

12 MR. ZIMMERMAN: And that is where we are kind of hung  
13 up.

14 THE COURT: Well, I think that's part of what I'm  
15 trying to get everybody focused on. You have got so many  
16 creative ways of resolving the case of this sort, but you have  
17 to focus on them.

18 MR. ZIMMERMAN: And I believe there are, and I think  
19 possibly, your Honor, and I'm speaking a little bit out of turn  
20 maybe, but at some point we can sit with your Honor, both  
21 sides, and talk about some ideas. We have sat with each other  
22 talking about it. We have kind of gotten to this point where  
23 we are sitting each other down, but we are not getting too far.

24 THE COURT: Right. Well, that's why I suggested that  
25 you create end game committees and get somebody to focus on it.

1 way is to get a sample case for each of those particular areas  
2 and try them. If you want to try them in this court, then we  
3 have to think about how to try them in this court. If they are  
4 not filed in this particular court, I certainly can't take them  
5 under 1407, but I probably could take them under 1404 if they  
6 are sent back to me for some reason.

7 MR. ZIMMERMAN: They go back and come back.

8 THE COURT: Right. But they would go back and come  
9 back. This approach would realistically require a joint effort  
10 or agreement. I would imagine a court if it get a remand from  
11 me and an agreement from the attorneys that the court can 1404  
12 it back to me, I would think a court would be willing to do  
13 this. But if one side says no, I want my briar patch, then I  
14 think that the local courts are going to be more reluctant to  
15 send it back. So that's a way of doing it.

16 If you have certain categories that you have problems  
17 on, see about resolving it either by sending certain cases to  
18 the forum state for resolution or having it sent back here  
19 under 1404 for resolution. And we go on with it. And that's a  
20 way of doing it, too.

21 But you have to be focused on that, because we are  
22 getting to the point now where I can't do much for you from the  
23 standpoint of discovery - it is about finished. And so we have  
24 got to think about how to resolve the cases at this point.

25 MR. ZIMMERMAN: But I guess there is resolved and then

1 THE COURT: All right. Bucky, do you have anything?

2 MR. ZIMMERMAN: I don't have much of a voice. What we  
3 have been really focusing on, your Honor, is seeing what the  
4 defendants and the plaintiffs can agree on in terms of  
5 resolving cases. We have not focused so much on how to package  
6 product for the litigants, going down the road on remand. We  
7 should have to spend some time on that.

8 But the process right now has two ways to resolve  
9 itself within this court: One is through individual mediations  
10 which are arduous and slow; and one is through any kind of  
11 resolution that you call global, which has been, seems to have  
12 been non-starter. We are still hopeful that something can be  
13 worked out in both of those areas. But it looks like we are  
14 going to have to wade through the trial to get any change in  
15 position. It is very easy for plaintiffs: We all want to  
16 resolve cases. And it is very easy for defendants to say we  
17 never want to resolve cases. But what we really need is, if  
18 there is some middle ground, we have not been able to strike  
19 it, and we keep trying.

20 THE COURT: Well, you know, there are a couple of ways  
21 of doing it. One is to try to carve out areas that you can  
22 mediate, and get to a point where you say these are the areas  
23 that we can't mediate. And so you have got to focus on  
24 resolution of those particular areas. There are two ways of  
25 doing that. One is to send them back to the states. Another

1 concept of MDL is to be of service to the litigants and to get  
2 you to a certain point. We can't have it become a black hole  
3 or something that the litigants lose total control over the  
4 case, and it just sits there and gathers dust. That's not good  
5 for the system; it is not good for the litigants, and it is  
6 terrible for the attorneys.

7 So we are getting to a point now where you have  
8 exchanges some seven or eight million documents. We still have  
9 some preliminary motions. We have a couple more areas that we  
10 need to deal with, and we have got to exhaust our opportunities  
11 in mediation.

12 But we are getting to the point at which you have to  
13 start thinking about the ultimate resolution of this case in  
14 other forums and how we go about doing it. Do we send them all  
15 back at one time? Do we take them on a case-by-case basis and  
16 send the New Jersey cases back first, the California cases back  
17 or something of that sort? Some kind of priority needs to be  
18 focused on whether we have any problems with class actions,  
19 state class action, whether that needs to be focused on. How  
20 do we package the evidence and send it back to the states? All  
21 of those sorts of logistical problems take a little more  
22 thought. You are the experts, and I am looking to you for some  
23 guidance.

24 MR. LEVIN: All of the above that you just mentioned,  
25 your Honor, we are just about there now.

1 MR. DAVIS: We have not heard from Verilaw since --

2 THE COURT: Are you still using those?

3 MR. DAVIS: Yes.

4 MR. IRWIN: They have been loving me lately, Judge.  
5 And I did see that. I saw something on my computer I believe  
6 yesterday or today that they have updated some aspect of the  
7 Verilaw as far as it is effective March 8th.

8 THE COURT: At the appropriate time we really need to  
9 all put our heads together and see what we have learned from  
10 this process and see whether or not we can make life a little  
11 easier in the future for all of you and your colleagues who  
12 have participated in this case. So let's keep good notes and  
13 see what we can do to deal with this later.

14 MR. DAVIS: Your Honor, the representatives of the end  
15 game committee from the PLC are present, Bucky Zimmerman and  
16 Arnold Levin.

17 THE COURT: Okay, fine. Let me hear from either one of  
18 you.

19 MR. LEVIN: I will be very short, your Honor. I speak  
20 only for myself. I am at the end of the process of the end  
21 game. I have some ideas for the end game which I will express  
22 when arguing the design issues. But it takes two to tango, and  
23 I have been dancing by myself.

24 THE COURT: What I had in mind with the end game  
25 committees is that you need to recognize the fact that the

1           Also, the forum court can do that and probably do it  
2 better if that's your approach. The MDL mediation process has  
3 to be in its approach more global. You have to look at cases  
4 and see whether or not those cases are able to be mediated, and  
5 if so, whether you can categorize those cases. And then once  
6 you categorize those cases, pick the best case and the worst  
7 case and establish some kind of goal post to which all the  
8 cases in that category should fit in between.

9           MR. DAVIS: Your Honor, the only other item is we have  
10 had some discussions with defense counsel regarding concluding  
11 or settling, and I believe that we will get those matters  
12 concluded rather soon.

13          THE COURT: All right. The trial schedule, I talked  
14 about the trial schedule with the Diez and Brock attorneys in  
15 the conference room, and I have got many pretrial motions that  
16 have been submitted. We talked about them in connection with  
17 the trial. Do we need to do anything more here?

18          The next one is thirteen, indemnity agreement.

19          MR. IRWIN: Your Honor, we have periodically received  
20 follow-up requests. When we do, and we can agree to assume the  
21 defense of the pharmacy. We do so and in accordance with the  
22 letter agreement, and when we execute those agreements, we send  
23 a copy to the plaintiffs liaison counsel.

24          THE COURT: All right. The next item is Verilaw.  
25 Anything on that?

1 much experts were paid and which experts were retained and  
2 various things of that sort that may have something to do with  
3 the work product of the attorneys.

4 MR. DAVIS: Your Honor, with respect to the  
5 declassified documents, since the joint report was prepared,  
6 and order has come out, and it has been complied with.

7 THE COURT: All right. And then eleven, mediation.

8 MR. DAVIS: Your Honor, we are on the plaintiffs side  
9 ready, willing and able to proceed to mediations.

10 THE COURT: Anything from the defendants?

11 MR. IRWIN: As are we. We have received some more  
12 materials, not only from Mr. Herman and related firms, but  
13 other firms. And we intend to take, resume discussions of  
14 mediation up again and do so right after these trials. And we  
15 are anxious to do so.

16 THE COURT: All right, fine. As I mentioned to you at  
17 the outset when you talked about mediation, the way that the  
18 MDL court can be a facilitating forum for mediation is if the  
19 parties will look at these cases or some of the cases or  
20 portions of the cases or whatever, hopefully all of that, but  
21 if you can't do all of them, you are going to look at the cases  
22 in which you can do it and seek some common ground in those  
23 cases. The MDL court is really not a forum in which you can  
24 look at each case individually and specifically. There isn't  
25 enough time to use that approach.

1 funds.

2 THE COURT: Okay. When you do that, I will put it  
3 under seal. And will you also be as specific as you can in the  
4 motion and also check with all the committee members, and in  
5 the motion indicate that they are agreeable to it. This  
6 information will be placed under seal simply because it  
7 involves some litigations costs, and it may be a personal  
8 privilege to the plaintiffs. And so it is just a private  
9 matter of the plaintiffs; and therefore, I am placing it under  
10 seal.

11 MR. DAVIS: Just to advise the court of one other  
12 matter. There is another check from a state case that's come  
13 in that Mr. Irwin is investigating, and we expect that that  
14 check will also be cleared up as to how much the amounts are or  
15 the deposit time. But it is one of the state cases that  
16 resolved themselves, and funds need to be deposited into the  
17 court, and I just bring this up so the court is aware that it  
18 is out there. But defense liaison counsel is on top of that  
19 and advised us that we will address it shortly.

20 THE COURT: While I said it is placed under seal, if  
21 anybody from the state liaison wishes to see the material or if  
22 any plaintiff wishes to see the material, they simple need to  
23 request it from the court, and I will give you an opportunity  
24 to look over the material. The reason it is placed under seal  
25 is simply because it has to do with litigation expenses: How

1 down the road by an individual or a particular matter, it can  
2 be addressed at that point.

3 MR. IRWIN: This might be something that might be  
4 appropriate for a pre-planned order. For example, since this  
5 information is preserved and since it may very well be within  
6 the case, specifically sales reps' conferences with the  
7 prescriber, it might be something that the first court would  
8 take up.

9 THE COURT: That's probably right. We ought to keep  
10 that in mind so nobody should destroy the hard drives. Let's  
11 retain them, and we will deal with that later.

12 MR. DAVIS: I will get back to your Honor on hard  
13 documents after Jim and I speak next week.

14 THE COURT: All right.

15 MR. DAVIS: The motion to compel we can pass on.

16 THE COURT: The next item is eight, 30(b)(6)  
17 depositions.

18 MR. DAVIS: With respect to the data base, the  
19 defendants produced the access data base, so we can pass that  
20 one.

21 THE COURT: Then the trust account, number nine.

22 MR. DAVIS: Your Honor, there has been deposited into  
23 the registry of the court the sums that are required under the  
24 pretrial order. The PLC would like to advise the court of its  
25 intention to be filing a motion to withdraw some of those

1 know what you all have worked out on the electronic  
2 information.

3 MR. IRWIN: With the court's permission, I would  
4 mention to the court that insofar as electronic production is  
5 concerned, my impression of the history of this is, and we will  
6 cross the bridge when we get to it if it comes time that we  
7 want to go to the time and expense of getting home computer  
8 records, and so I think now that's where we are in the  
9 meet-and-confirm question as to determine whether we do that  
10 and to determine how that expense is handled. And I think  
11 that's a question for our consultants. That's what the  
12 meet-and-confirm is about.

13 THE COURT: Yes. And you need to get with the  
14 consultants on that. And the way I see it working is for some  
15 program of sampling to be instituted to see whether or not  
16 there is anything that's worth the time and effort. So you  
17 have got to before you expend the time and effort and washing  
18 everything, you have got to just come in and see, make 10, 20,  
19 30, whatever the appropriate sampling is and test that and see  
20 whether or not it is worthwhile. And then if it is worthwhile,  
21 then we decide about how much cost it is going to take and how  
22 much time it is going to take.

23 MR. DAVIS: In addition to that, one of the items that  
24 we have discussed is keeping that electronic issue open even  
25 after the MDL may be concluded so if the information is desired

1 have conflicts between trials and discovery. So just be aware  
2 that we are moving into that hectic time, and I suspect it is  
3 going to get worse before it gets better.

4 MR. DAVIS: Your Honor, set for hearing today is a  
5 motion to compel production of documents of sales force. We  
6 have had discussions regarding that motion. That motion  
7 involves both electronic information, what we commonly call  
8 detail letters or sales reps had out in the field, as well as  
9 hard copy documents. We spoke about that earlier this morning,  
10 and defense liaison counsel has advised us that with respect to  
11 hard documents either those have been produced or they will be  
12 produced in response to the motion.

13 With respect to electronic information, we have agreed  
14 that we will discuss that further and some of the logistics  
15 that go into that. But we would like to get the hard copy  
16 documents taken care of now.

17 THE COURT: What's the response from the defendants?

18 MR. IRWIN: Your Honor, with respect to the hard copy  
19 documents, we believe that they have been produced. We will  
20 confirm to Mr. Davis in writing by the end of the next week  
21 with the court's permission that the hard copy documents have  
22 been produced.

23 THE COURT: All right.

24 MR. IRWIN: Is that acceptable?

25 THE COURT: Yes, that is. And at the same time let me

1 complete. Jim?

2 MR. IRWIN: Yes, that is correct, your Honor. We  
3 confirmed that in writing.

4 THE COURT: Okay.

5 MR. DAVIS: I skipped ahead to the request for  
6 admissions, and so we have already covered that. On January  
7 24th PLC served upon defense liaison counsel a set of  
8 interrogatories, set number seven. We are waiting for a reply,  
9 and we spoke about that. Jim can advise the court on that.

10 MR. IRWIN: And we are working on that. And I would  
11 hope that we would have a response shortly, but I don't have a  
12 deadline at the moment.

13 THE COURT: What's a reasonable deadline on that, two  
14 weeks?

15 MR. IRWIN: Could I be permitted to report to Mr. Davis  
16 next week about that?

17 THE COURT: Let's do that. And Mr. Davis, let me know  
18 either by letter or something as to what the date is. Let me  
19 make a comment. I know we have trials and I know you have  
20 trials in California and maybe in New Jersey, New York and a  
21 couple of other states. But you have to anticipate some of  
22 that and both sides have to be able to have somebody who is  
23 continuing this discovery process while the trials are going  
24 on. You need a division of labor.

25 But now increasingly more and more you are going to

1 make sense.

2 So if you need a court order to get into a place, let  
3 me know and I will do it. Also, get me the name of the  
4 decision maker who is doing the scheduling with you. If  
5 necessary, I will order him to come to court and talk to me.

6 MR. DAVIS: Judge, I told the Degge Group counsel that  
7 I would get back to them within a time frame, but if the court  
8 had in mind, if you would like to give them some directions, I  
9 will.

10 THE COURT: I would like you to go as quickly as you  
11 can perhaps within the next two weeks, go and view the  
12 equipment. And depending upon what you need, bring it to me,  
13 and I will consider ordering them to produce it.

14 MR. DAVIS: Thank you.

15 THE COURT: Class certification. The parties indicated  
16 that that should be deferred until additional electronic  
17 discovery. Anything further on that?

18 MR. DAVIS: We will have additional discussions with  
19 defense liaison counsel.

20 THE COURT: Seven, the plaintiff and defendant  
21 respectively request for production.

22 MR. DAVIS: Your Honor, with respect to a major request  
23 for production, set number six, we have received on an ongoing  
24 basis documents. Defense liaison counsel has now advised us  
25 that the documents responsive to request number six is

1           The Degge Group was granted an extension until March  
2           the 12th. I communicated with counsel for he Degge Group. I  
3           have a letter if your Honor would like that letter, but in  
4           essence they have asked for additional time. They also told us  
5           that they believe they have 20,000 documents somewhere in North  
6           Virginia. I asked them what else they had. They have both  
7           electronic and hard copy documents.

8           I indicated to their counsel that your Honor typically  
9           has asked for the name of an individual who is there, the  
10          address, the telephone number, as well as indicated a desire to  
11          get the production sooner than later. The Degge Group has  
12          indicated that it will take well over a hundred hours of man  
13          time to assemble the material, and they don't think that they  
14          can get it until the end of April.

15          So I told them that I would report that to the court,  
16          and that following this conversation I would be able to get  
17          some directives from your Honor and will send some people to  
18          the Degge Group to try to lessen the burden if that's  
19          necessary. But we don't think that we ought to be expending a  
20          huge amount of dollars to get third-party subpoenas, albeit,  
21          they would like us to do so, I believe.

22          THE COURT: What you need to do is go there and take a  
23          look at the documents and see which documents you need.  
24          Because there is not sense getting 20,000 documents or  
25          thereabouts when you only needed a dozen of them. It doesn't

1 defendant to exclude those that are not. Let's try to do it  
2 the easier way.

3 MR. DAVIS: Your Honor, I think I have jumped out of  
4 order on some of these matters. I had inadvertently so that I  
5 can go back, and I apologize. I am on section five now. With  
6 respect to subpoenas duces tecum issue to Sines, also known as  
7 Nelson, we have communicated with defense liaison counsel, and  
8 we are waiting for a certification on that. I don't know where  
9 that stands right now.

10 MR. IRWIN: This involves a condition where there was a  
11 change in ownership. Certification was received from Nelson.  
12 I think it was Nelson. Certification was received, and the  
13 question was whether this person could certify the response for  
14 the, and maybe I'm messing this up a little bit, but maybe the  
15 former entity as well as the current entity. And we, John  
16 Winter is looking into that. I expect he will be able to  
17 confirm that certification for both entities, but one  
18 certification has been received. And the question is whether  
19 it is fully satisfactory.

20 THE COURT: Let's do that within a week.

21 MR. IRWIN: Yes, sir.

22 MR. DAVIS: With respect to a number of other  
23 third-party subpoenaed duces tecum that were issued, they are  
24 outlined in the joint report. MEDCOM has said they will get  
25 back to us as soon as we granted them an extension of time.

1 categories of documents that we thought we could agree on and  
2 admit 803-6 was satisfied. Some we felt were admissible and  
3 some we thought were not.

4 We have at this moment now set that aside because of  
5 the Diez trial. We think that the way to do this would be to  
6 follow this format: Basically would be to make a response by  
7 categories in this fashion, but it is going to take us more  
8 time. I remember your Honor suggested, I believe, when we  
9 spoke about this last time at one of our conferences that we  
10 make responses serially. For example, if we can be satisfied  
11 that some reports are satisfied, then we can identify all of  
12 those and make an initial response. At least we would get that  
13 out of the way. We think that is a sensible way of doing it.  
14 But right now we are working on the Diez trial.

15 THE COURT: Where are you with that, are you agreeable  
16 with that approach, or do you need it more quickly?

17 MR. DAVIS: We think we need it before then. It's been  
18 outstanding for quite some time.

19 THE COURT: Let's send the material that you have  
20 already gone through to him so that he has got as much as you  
21 have and let's continue on with that. I won't set any  
22 deadlines, but I am interested in getting it done post haste.  
23 Plaintiff attorneys have to get to me on that if you don't get  
24 it soon. What I will do is just declare that all such  
25 documents are business records and put the burden on the

1 defendants some requests for admissions that your Honor is  
2 aware of. That's been discussed at prior conferences. We have  
3 gotten no responses to any of those, and again, I remind the  
4 court that the states are looking to the coordination and I am  
5 very concerned just as I am about the Zipes material because  
6 that is going to impact a state case by having it produced so  
7 late. And I believe that these state lawyers are looking very  
8 much for this information.

9 THE COURT: Any input from Mr. Arsenault on that?

10 MR. ARSENAULT: I think Mr. Davis has been coordinating  
11 that activity and speaks authoritatively on that.

12 THE COURT: Let me hear from the defendants.

13 MR. IRWIN: Your Honor, at the present time we have no  
14 other cases set for trial other than Calbert and the Diez case.  
15 The request for admissions that we have been dealing with  
16 comprises, it consists of a request that we admit the business  
17 records status of 3,900 documents, 803-6. What we have done is  
18 my office has looked at a hundred of these documents that we  
19 have selected randomly. Some categories of documents readily  
20 satisfy the 803-6 requirements. Examples would be clinical  
21 research reports that are regularly kept in the ordinary course  
22 of business and prepared by us. Other documents clearly do  
23 not, and they would be documents like, say, for example, an  
24 e-mail with marginalia on it or something like that. As a  
25 result of that, what I call a pilot, we identified a number of

1 Calbert trial in California starting the exact same day. So I  
2 know we are all, it is important for us to stay on top of this,  
3 but I hope the court would recognize that our time frame right  
4 now is a little pressed.

5 THE COURT: What's your suggestion, Mr. Davis?

6 MR. DAVIS: With all due respect, that is an expert  
7 that's to be called in both of those trials, I believe. So it  
8 is very clear that the information needs to get in sooner  
9 rather than later.

10 MR. IRWIN: Well, your Honor, the discovery is over in  
11 our case here. In the Diez case, this has nothing to do with  
12 the Diez trial, nothing. Now, these things may be relevant to  
13 further cases down the line; they may be relevant to, once the  
14 cases are remanded as part of the court's remand order  
15 including this. There is no question but that Dr. Zipes  
16 received \$600,000 from the defendants, and he has testified to  
17 that. And that would certainly be appropriate to ask him on  
18 cross-examination. But I think that it is not the same to say  
19 that this discovery is related to the Diez case. It certainly  
20 is not.

21 THE COURT: Okay. Let's have it a week after the Diez  
22 trial.

23 MR. IRWIN: Yes, your Honor.

24 THE COURT: Anything further on third-party subpoenas?

25 MR. DAVIS: Yes, your Honor. The PLC served upon the

1 whether or not a comprehensive reply from the expert of the  
2 defendants has been obtained. We have had some discussions and  
3 I understand that this material will be supplemented at some  
4 time, and I expect to receive that shortly. The PFC would ask  
5 that some time constraint be provided so that we can get this  
6 matter concluded.

7 THE COURT: What's the reasonable constraint from the  
8 defense standpoint?

9 MR. IRWIN: Judge, it is something we worked a great  
10 deal on. We have provided a great deal of information in  
11 response to these requests, including information consisting of  
12 a number of pages and material and references to Bates numbers  
13 of documents that have been previously provided. There was a  
14 concern expresses in the last letter about requesting more  
15 specificity in that response, and I told Mr. Davis that we  
16 would provide more specificity with respect to the large number  
17 of documents we identified. We are also going to update our  
18 response with respect to the total number of dollars paid to  
19 Dr. Zipes in connection with expert or consulting services he  
20 has done for J&J. I think your Honor will recall the number  
21 was in the neighborhood of \$600,000. We will supplement that  
22 response.

23 The problem is, Judge, that my office is now preparing  
24 for this trial here, and the person who is really working most  
25 with Dr. Zipes is Fritz Zimmer, and he is preparing for the

1 objection with regard to the dismissal. I will dismiss with  
2 prejudice. I will award costs, but the costs are to be paid at  
3 the end of the case and are to be taxed as court costs in the  
4 amount of \$200 per case. Anything further on that issue?

5 Service list of attorneys is number four on the agenda.

6 MR. IRWIN: As is customary, your Honor, we have the  
7 service list of attorneys, and I will present a copy to you,  
8 your clerk, Ms. Lambert, and to Mr. Davis and to Mr. Arsenault.

9 THE COURT: Okay.

10 (COUNSEL HANDS DOCUMENTS TO DEPUTY LAMBERT AND COUNSEL  
11 DAVIS AND COUNSEL ARSENAULT.)

12 THE COURT: The next item is five, third-party  
13 subpoenas duces tecum. Any report on that from the plaintiffs'  
14 committee?

15 PLAINTIFFS' COMMITTEE REPRESENTATIVE: Your Honor, with  
16 respect to third-party subpoenas duces tecum that have been  
17 issued, I will begin with the one that was issued to Dr.  
18 Douglas Sykes back in February, February 7th. The PFC got some  
19 documents that were responsive. We have had ongoing  
20 discussions with defense liaison counsel, and your Honor is  
21 certainly aware. I have those. We have not gotten a response  
22 to the most recent communication, which was a February 19th  
23 letter wherein we outlined a request that the items that are  
24 specifically responsive to the subpoena be identified and a  
25 certification be provided as well as an understanding as to

1 responses from two plaintiffs. We would ask that the court, we  
2 withdraw the motion to dismiss with respect to these to  
3 plaintiffs. We would ask that the court award us costs in the  
4 amount of \$250 per plaintiff to be paid by these plaintiffs for  
5 forcing us to file this motion and write all of these letters.  
6 These two plaintiffs are Juan Jose Olayda and Lawrence  
7 Williams. Catrice Burrell was subject to the motion. She  
8 filed a PPM timely but did not submit authorizations. We,  
9 therefore, reserve our motion with respect to her. We  
10 understand from Mr. Murray's office and Mr. Amedee's office  
11 that they will be getting us those authorizations. When they  
12 get us those authorizations, we will withdraw that motion.

13 Finally, there was an opposition that was received in  
14 the Bowden matter, and the plaintiffs are Delores Dowden, Emma  
15 McClain, Thelma Masters, Debra Rocket and Jewel Sherrill. They  
16 have filed an opposition asking for more time. We oppose that.  
17 We think it is too little, too late, and we would ask that the  
18 court grant our motion with respect to those individuals. Now,  
19 Mr. Davis tells me another opposition may have come in this  
20 morning. I don't know about that, but he and I will discuss  
21 that and report to the court accordingly.

22 THE COURT: I understand the plaintiffs' committee  
23 objections to the dismissal in particular and argues that it be  
24 given without prejudice. And with regard to costs, they object  
25 to the costs being awarded at this time. I will override the

1 motion. Our position and the documents supporting it are a  
2 matter of record and have been discusses with the court before.  
3 I did want to recite to the court the status of the responses  
4 to the motions as we appreciate them. I have some names to  
5 read into the record. We will than after this hearing submit  
6 to the court and in due course to plaintiffs liaison counsel an  
7 order providing for our suggested disposition of this motion as  
8 it relates to those people who have responded and those people  
9 who have not responded. So if I may proceed, I would read into  
10 the record those names.

11 THE COURT: All right.

12 MR. IRWIN: The following, there were 52 people that  
13 were the subject of this motion. Judge, the following 20  
14 individuals actually had sent PPMs to Drinker, Biddle's office,  
15 and the PPMs that weren't sent to Drinker, Biddle's office and  
16 our motion crossed in the mail. Therefor, we are satisfied  
17 that these were timely, and we will withdraw the motion to the  
18 following 20 individuals: Robert Beasely; Vernel Daniels;  
19 Robert D. Mosantos, Jr.; Sandra Dickerson; Rachel Douglas;  
20 Ronald Guillory; Robert Curbesky; Shaday Odom; Brandon Rader;  
21 Leonardo Ramos; Florence Riven; Ethel Rogers; George Smith;  
22 Eugene Sodo; Jane Stanley; Kerry Thomson; Roy Wagner; Joy  
23 Waters; Bennie Weld; Valerie Whitworth; Don Wilson and Michael  
24 Wilson.

25 Since filing the motion, your Honor, we have received

1 litigation. Let's keep an eye on that, okay.

2 The second item is the state of the liaison counsel.  
3 Is that where we are?

4 MR. WRIGHT: Mr. Arsenault will report to the court on  
5 that.

6 MR. ARSENAULT: No development there, your Honor.

7 THE COURT: Again as I do all the time, I tell you that  
8 I am interested in your access to all of the documents that's  
9 discoverable here and also to make sure that your trials in  
10 your states are proceeding. And if there is anything that we  
11 can do to facilitate that from the MDL, I need to know it so  
12 that I can at least focus on it. I don't want the MDL to stop  
13 you from proceeding. State Liaison Counsel have been very  
14 valuable in helping to coordinate the state and MDL  
15 proceedings. One of the problems we have in MDL is that  
16 everybody goes their own way and there is no coordination.  
17 Through your efforts, we have had some coordination and the  
18 court appreciates that.

19 The third item is the patient profile form and  
20 authorization.

21 MR. IRWIN: Your Honor, paragraph three of the joint  
22 report recites the status of the receipt of the patient profile  
23 form. We have before the court today a motion, the second  
24 motion of this kind, with respect to 52 plaintiffs who failed  
25 to timely furnish PPMs. I don't proposes to go over that

1 of the hard copy documents. And the PSC questions whether or  
2 not everything has been produced that's been requested. So  
3 there are some issues that are hanging out there, and we are in  
4 the process of discussing those.

5 THE COURT: The reason that I am focusing everybody's  
6 attention on this is that one of the purposes of the MDL, one  
7 of the reasons for the MDL is to provide one forum so that  
8 everything can take place within this forum. After that period  
9 of time, then the MDL court has to begin divesting itself of  
10 the cases so that the cases can go their own way either by  
11 settlement or by trial or by some other mechanism so that there  
12 is some resolution. It gets to the point where the MDL forum  
13 is counterproductive after you have used it for its intended  
14 purpose. So everybody has got to be conscious of that. I  
15 don't want to just keep a case here because I have it. I want  
16 to keep it here as long as it is serving a purpose for the  
17 litigants. But once it ceases to serve the purpose for the  
18 litigants, then we have to get rid of the case and get it back  
19 so that it can be resolved.

20 Having said that, there are some issues that the court  
21 can deal with. There may be some Dauber issues; there may be  
22 some class action issues. There may be some other common  
23 issues and also the MDL can supply a forum for mediation for  
24 those cases that can be mediated. But after we have done that,  
25 we have got to get on our way about getting finished with this

1 addressed, and it is expected that will be resolved by the  
2 conclusion of this Monday.

3 THE COURT: Okay. So discovery then will be finished  
4 at that time. Is that what you are talking about, both of you?

5 MR. IRWIN: There are a couple of outstanding motions,  
6 Judge, that relate to some requests for production of No. 7,  
7 which we will touch upon. And there is a motion with respect  
8 to the production of home computer records of the sales reps  
9 that we will discuss, but it is our impression that by and  
10 large, yes, we are nearing conclusion.

11 MR. WRIGHT: Mr. Davis is in contact with Mr. Irwin.  
12 May he say something to that matter?

13 THE COURT: Sure. Let me hear from Mr. Davis.

14 MR. DAVIS: Your Honor, Leonard Davis of the Herman  
15 Mathis law firm. The PSC is not sure whether or not discovery  
16 is yet complete, although I have every reason to believe what  
17 Jim says as to the production will occur. We have some issues  
18 regarding CDs containing e-mails that have been produced. We  
19 discussed that with defense liaison counsel. I expect that  
20 this will be addressed, but it has been some time, and it has  
21 been hanging out there that some of these electronic issues  
22 have been discussed.

23 With respect to the hard copy documents, there is set  
24 for today a motion to compel on the sales rep documents. That  
25 is just not limited to electronic documents. That's also part

P R O C E E D I N G S

(FRIDAY, MARCH 7, 2003)

(COURT CONVENED AT 9:38 A.M.)

THE COURT: Be seated, please. I apologize for being 20 minutes late. I was conferring with liaison counsel, and we had some matters that took us longer than usual. Counsel, make your appearances for the record, please.

MR. WRIGHT: Your Honor, I'm Bob Wright, one of the members of the PSC. I would like permission to stand in for Mr. Herman.

THE COURT: Yes.

MR. IRWIN: Good morning, Jim Irwin for the defendants.

THE COURT: Okay. We are here today first in connection with the monthly report regarding the MDL status. I will hear from the parties I have been presented with a joint report. The first item on the agenda is an update of rolling document production, electronic discovery.

MR. IRWIN: Your Honor, the report recites the status of the document production, which as we know is about complete. There had been a few more electronic documents produced, a handful of part-copies documents from Titusville, New Jersey. The total number of documents now pages now exceed seven million. There are still a couple of issues involving deciphering some additional documents, but these are being
